Summary

Final-year Computer Science student specializing in AI/ML and Full Stack Development, with technical proficiency in Python and Java. Strong foundation in Data Structures and Algorithms (DSA) with a proven ability to engineer intelligent, high-efficiency applications. Focused on building high-efficiency applications and applying Software Engineering principles and Agile methodologies to deliver results in collaborative team environments.

Education

Kalinga Institute Of Industrial Technology, Bhubaneswar, Bachelor of Technology in Computer Science — August 2022 – July 2026

Certification & Experience

Walmart USA Advanced Software Engineering Virtual Experience Program on Forage

- Executed a high-fidelity Software Engineering simulation, delivering technical tasks involving complex system architecture.
- Engineered an improved heap structure in Java, resulting in a 20% increase in data retrieval speed.
- Architected UML class diagrams to standardize operating modes and streamline database connectivity.
- Formulated comprehensive Entity-Relationship Diagrams (ERD), reducing data redundancy and improving database architectural clarity.

Electronic Arts Software Engineering virtual experience program on Forage

- Authored a detailed feature proposal for EA Sports College Football, aligning technical requirements with user engagement goals.
- Designed C++ header files and class structures that reduced code complexity by 15%.
- Resolved critical bugs and refactored in-game data structures, improving overall system efficiency by 18%.

Web Development Intern — InternPe — July 2023 – August 2023

- Programmed responsive web interfaces using HTML, CSS, and JavaScript, enhancing frontend usability by 15%.
- Engineered Node.js backend integrations for 3 distinct APIs, significantly improving UI performance and data flow.
- Collaborated in a remote Agile environment to deliver modular full-stack components on schedule for client-facing projects.

Projects

EcoHarvest- Full-Stack MERN Application

- Architected a MERN (MongoDB, Express, React, Node.js) web application focused on sustainable agriculture solutions.
- Designed RESTful APIs and responsive components, achieving a 10% improvement in page load performance.

Credit Card Approval Prediction

- Constructed predictive ML models using Scikit-learn and Pandas, achieving a 78% classification accuracy.
- Executed hyperparameter tuning and feature selection to reduce false positive rates by 8%.

Prediction of Urban Traffic Flow using Machine Learning

- Deployed a GRU-based time series model using TensorFlow and Keras, reaching 85% forecasting accuracy.
- Applied SMOTE techniques to mitigate data imbalance, increasing model consistency by 12%.

Technical Skills

Programming Languages- PYTHON, Java, C, JavaScript, SQL.
Frameworks Libraries- HTML, CSS, React.js, Node.js, Express.js, TensorFlow, Keras, Scikit-learn, Pandas, NumPy.
Databases Tools- MongoDB, SQL, Git, GitHub, Docker, Google Colab, Jupyter Notebook, VS Code.
Core Concepts- Data Structures Algorithms (DSA), Machine Learning, Artificial Intelligence, Agile Methodologies, Cloud Computing, DBMS.
