Summary

Detail-oriented Data Analytics & Machine Learning fresher skilled in Python, SQL, Power BI, Tableau, and Excel. Hands-on experience with EDA, predictive modeling, and business intelligence dashboards through academic projects and virtual internships. Strong foundation in statistical analysis, data visualization, and machine learning algorithms. Seeking an entry-level role in Data Analytics / Data Science (Expected Graduation: May 2026) to apply analytical and technical skills to solve business problems.

Skills

Programming & Data: Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), SQL, Excel
Visualization Tools: Power BI, Tableau
Machine Learning: Supervised & Unsupervised Learning, Deep Learning (TabNet), Model Deployment
Concepts: Data Cleaning, EDA, Feature Engineering, Dashboarding, Statistical Analysis
Other: Git, Jupyter/Colab, ETL Processes, FastAPI

Experience

Data Science Intern | **Internboot (Remote)**

Aug 2025 – Oct 2025

- Worked on training projects to strengthen machine learning and data analysis skills using Python, pandas, and scikit-learn.
- Collaborated with mentors and peers on real-world case studies, delivering actionable insights from raw datasets.
- Applied Python for end-to-end data preprocessing, model building, and visualization using matplotlib and seaborn.

Education

B.Tech –Computer Science & Information Technology | MIET, Meerut ***CGPA: 8.7 | Expected: May 2026***

Senior Secondary (XII) – Science (CBSE) | Royal Public School ***CGPA: 9.3***

Projects

Customer Churn Prediction ***(Jan 2026)***

- Developed a customer churn prediction model using TabNet on the IBM Telco dataset, achieving ~95% accuracy.
- Built a robust preprocessing pipeline to handle categorical and numerical features consistently.
- Hosted on Hugging Face — https://huggingface.co/spaces/Lovely00/Customer-Churn-Prediction

Housing Price Predictor ***(Nov 2024)***

- Developed a predictive model to estimate property prices based on multiple features using Linear Regression and Random Forest.
- Improved R^2 score significantly by applying feature engineering and hyperparameter tuning.
- Visualized key factors affecting housing prices using matplotlib and seaborn for stakeholder reporting.

Superstore Sales Analysis ***(Feb 2025)***

- Conducted comprehensive sales and profit analysis on the Superstore dataset using Python and Power BI.
- Created interactive dashboards visualizing sales by region, product category, and customer segment across 10,000+ records.
- Generatedactionable business insights to identify high-performing categories and underperforming regions.

Certifications

- Python Programming – GeeksforGeeks
- Machine Learning – freeCodeCamp
- Data Visualization – freeCodeCamp
- Data Fundamentals – IBM
- GenAI-Powered Data Analytics Simulation – Tata Group (Forage)
- Data Science – IBM
