PRINCE KUMAR

+91-8294584119 | princekumarkha2005@gmail.com | LinkedIn | Greater Noida, Uttar Pradesh

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, HTML, CSS, Python

Frontend: React.js, Redux, Bootstrap, Responsive Web Design

Backend: Node.js, Express.js, MVC Architecture

Databases: MongoDB, Mongoose, MySQL

Authentication: JWT, Role-Based Access Control

Tools & Technologies: REST APIs, CRUD Operations, Git, GitHub, Postman, Vite, VS Code, NPM, Wireshark, John the Ripper, Steganography Tools, Zphisher, AWS Devops

CERTIFICATIONS

1. MERN Stack Web-Development with devops
2. Cisco Networking Academy – Introduction to Cybersecurity
3. Cisco Networking Academy – CCNA: Introduction to Networks
4. Infosys Springboard – React.js Certification

ABOUT ME

Detail-oriented and motivated Software Engineer with strong foundation in **full-stack development and DevOps practices**. Experienced in building scalable MERN applications, developing REST APIs, and implementing secure authentication systems. Skilled in debugging, system optimization, and working with modern development tools. Passionate about automation, CI/CD workflows, and delivering efficient, high-quality software solutions aligned with client requirements.

INTERNSHIPS & PROJECTS

DEVELOPER **MAY 2025 – JULY 2025**
E-book Management App

Tech Stack: MERN Stack (MongoDB, Express.js, React.js, Node.js)

1. Developed a fully functional MERN-based e-book management system with category-based classification.
2. Built RESTful APIs to support Create, Read, Update, and Delete (CRUD) operations with secure access.
3. Implemented image upload functionality and integrated MongoDB with Mongoose for backend data handling.
4. Tested and debugged application to ensure smooth performance
5. Designed a responsive React.js frontend with a dark/light mode toggle using Tailwind CSS.

DEVELOPER

MyAnatomy **Jun 2025 – SEP 2025**
HydroTrim – Water borne disease surveillance platform

Tech Stack: React 18, Tailwind CSS, Recharts, Framer Motion, Node.js, Express.js, MongoDB, Mongoose, JWT

1. Built a MERN-based real-time monitoring system for cholera, typhoid, and dengue outbreaks.
2. Developed role-based dashboards (User, Hospital, Admin) with data visualization and responsive UI.
3. Implemented MongoDB Change Streams to trigger instant SOS alerts on case spikes.
4. Implemented **Change Streams for real-time alerts**, improving system responsiveness
5. Added multilingual (EN/HI) support using Context API and localStorage.
6. Implemented JWT authentication, protected routes, and RBAC for secure access.

EDUCATION

B. TECH, COMPUTER SCIENCE **NOV 2022 – APRIL 2026**
Noida Institute of Engineering and Technology, Greater Noida **GPA: 8.1**

Key Coursework:

1. Cybersecurity, Data Structures and Algorithms, Web Development, Database Management Systems
2. Gained strong practical and theoretical knowledge in full-stack development and ethical hacking.
3. Engaged in multiple project-based learning experiences involving secure web technologies.
