ABHISHEK SINGH

Noida, UP 201301 | P: +91- 9205908703 | div.abhisheksingh@gmail.com

SUMMARY

Motivated Computer Science student specializing in IoT and full-stack web development, with hands-on experience building MERN applications, automation systems, and cloud-connected IoT projects. Skilled in JavaScript, React, Node.js, Python, and microcontrollers, with a strong focus on problem-solving, clean architecture, and delivering fast, reliable solutions. Seeking an internship or entry-level role to contribute to real engineering teams and build scalable products.

EDUCATION

NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY — **Greater Noida**
Bachelor of Engineering (B. Tech) — Expected May 2026
Specialization in Internet of Things

PHYSICS WALLAH — **Noida**
MERN stack with Gen AI — Expected August 2026

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java
Web Development: HTML, CSS, Node.js, React
IoT & Embedded: Arduino, ESP32, Sensors, Actuators
Tools: Git, GitHub, Replit, VS Code

UNIVERSITY PROJECTS

Smart Brij: IoT-Enabled Autonomous Dairy Management System

- Developed a conceptual end-to-end IoT ecosystem for livestock monitoring and farm automation.
- Designed a dashboard to visualize real-time data from environmental sensors using Replit.
- Researched and integrated agricultural policy frameworks to align technology with regional development goals.

Personal Portfolio Website

- Designed and deployed a responsive personal brand hub using **React** and **Tailwind CSS**.
- Implemented clean, component-based architecture to effectively showcase technical projects, skills and contact information.
- Engineered a mobile-first, interactive user interface utilizing **React hook** and **Tailwind CSS** utility classes to optimize user engagement and accessibility.

Arduino Smart Radar System

- Engineered a smart radar system utilizing an Arduino microcontroller to continuously scan and detect nearby objects in real-time.
- Integrated a [Sensor HC-SR04] Ultrasonic sensor and a servo motor to accurately map spatial data across a 180-degree radius.
- Programmed a dynamic visual interface using Python to translate serial data into an interactive radar screen displaying obstacle distance and angle.
