Himanshu Pratap Rana

Indra Lok Colony, Bypass Road, Bulandshahr, Uttar Pradesh – 203001, India
himanshuthakurshabji@gmail.com — +91-6397020913 — LinkedIn — GitHub

Education

Noida Institute of Engineering Technology (NIET), Greater Noida, Uttar Pradesh
Bachelor of Technology in Computer Science and Engineering *2022 – Present*

Skills

- **Languages:** Java 8, SQL
- **Backend:** Spring Boot, REST API Development, Microservices Basics
- **Database:** MySQL (Schema design, indexing, query optimization)
- **Tools and Technologies:** Git, Maven, Postman, IntelliJ IDEA, VS Code
- **Testing and DevOps:** JUnit (Basic), CI/CD Concepts, Docker (Learning)
- **Core Concepts:** Data Structures Algorithms (DSA), Object-Oriented Programming (OOP), Debugging,
- **Soft Skills:** Fast Learner, Strong Team Collaboration, Clear Communication, Adaptability

Experience

Software Engineering Virtual Experience — J.P. Morgan Chase & Co. (Forage) *July 2025*
Certificate Link

- Built a stock-price analytics dashboard using Java, SpringBoot and RESTful services to process and visualize market data.
- Worked with J.P. Morgan's proprietary tools, APIs, and open-source technologies to replicate practical engineering workflows and production environments.
- Gained hands-on experience with Core Java, Spring Boot, OOP design principles, API integration, and backend development best practices.
- Strengthened problem-solving, debugging, and code optimization skills while delivering clean, modular, and maintainable backend components.

Projects

AI Career Advisor – GitHub Link Live Demo

- Engineered an intelligent career guidance platform using React, Spring Boot, and MySQL, enabling data-driven recommendations for students and job seekers.
- Integrated the OpenAI API to generate context-aware suggestions by analyzing users' academic records, interests, technical skills, and long-term goals.
- Designed a responsive, user-centric interface with optimized management, ensuring consistent performance across devices.
- Deployed the application to a production environment, implementing best practices for API security, error handling, scalability, and real-time data flow.

Personal Journal Backend Application (Ongoing) – GitHub Link

- Developing a robust, secure backend service using Spring Boot and MongoDB to support user-specific journaling features.
- Implementing JWT authentication, password hashing, and role-based access control to ensure high data confidentiality and secure access.
- Building a suite of RESTful APIs for user onboarding, session management, and CRUD operations on journal entries.
- Applying a layered architectural pattern (Controller–Service–Repository) to achieve modularity, separation of concerns, and long-term maintainability.

Achievements

- Solved 100+ Data Structures and Algorithms problems on LeetCode [Link]
- Achieved 5-Star Java certification on HackerRank [Link]
