PROFESSIONAL SUMMARY

MERN Stack Developer with hands-on experience building scalable, full-stack web applications using MongoDB, Express.js, React.js, and Node.js. Proficient in RESTful API design, real-time communication with Socket.IO, JWT authentication, and responsive UI development. Adept at applying Data Structures and Algorithms to optimize application performance, with 200+ LeetCode problems solved. Passionate about coding, automation, and delivering real-world IT solutions.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java, C++

Web Technologies: HTML5, CSS3, React.js, Node.js, Express.js, REST APIs, Socket.IO, XML

Databases: MongoDB, MySQL, SQL

Tools & Platforms: Git, GitHub, VS Code, AWS, Vercel, Postman

Core Concepts: Data Structures & Algorithms, OOP, Networking, JWT Auth, Machine Learning (basics)

PROJECTS

CodeWithMe – Real-Time Collaborative Code Editor | *MERN Stack | Socket.IO | Monaco Editor | JWT* *LiveLink*

- Architected a multi-user real-time collaborative coding platform where multiple developers can join shared rooms and write code simultaneously, delivering a Google Docs-like experience for technical teams.
- Implemented bi-directional real-time event synchronization using Socket.IO, ensuring instantaneous propagation of code edits, cursor positions, and user join/leave events across all connected clients.
- Integrated Monaco Editor (the engine powering VS Code) to provide professional-grade syntax highlighting, intelligent auto-completion, and multi-language support directly in the browser.

Smart HealthCare Assistance | *React.js | Node.js | Express.js | MongoDB | JWT*

- Engineered a full-stack MERN healthcare platform enabling digital doctor appointment scheduling, prescription management, and patient record storage, reducing manual paperwork dependency.
- Designed and secured RESTful backend APIs with JWT authentication and role-based access control, enforcing patient-doctor data isolation and preventing unauthorized record access.
- Built a responsive, mobile-first React.js UI that streamlined the appointment booking workflow, improving patient onboarding efficiency and reducing time-to-appointment.

FarmerShop – Direct-to-Consumer AgriMarket | *React.js | Node.js | Express.js | MongoDB*

- Developed a MERN e-commerce platform eliminating agricultural middlemen by connecting farmers directly with consumers, enabling transparent produce pricing and wider market reach.
- Built secure product listing and order management REST APIs using Node.js and MongoDB, supporting full CRUD operations for inventory tracking and transaction processing.
- Designed a lightweight, mobile-optimized React.js UI tailored for low-bandwidth rural connectivity, enabling non-technical farmers to upload and manage produce listings with minimal friction.

EDUCATION

B.Tech – Computer Science & Engineering *2022 – 2026*

KCC Institute of Technology and Management, Greater Noida | CGPA: 7.2

Higher Secondary (Class 12) – Science *2021*

Dr. Rizvi Learners Academy, Jaunpur

ACHIEVEMENTS

- Solved 200+ LeetCode problems spanning arrays, trees, dynamic programming, and graph algorithms, reinforcing core DSA skills critical for software engineering roles.
