SUMMARY

Results-driven Cybersecurity professional with demonstrated experience in vulnerability assessment, penetration testing, and SOC operations. Hands-on expertise with Splunk, Metasploit, Nmap, OpenVAS, and Burp Suite Professional, with proficiency in **CVE** analysis and **threat intelligence**. Seeking to apply skills in threat hunting, incident response, and network defense to contribute to a forward-thinking cybersecurity team.

EDUCATION

Master of Computer Application **2025–2027**
Noida Institute of Engineering and Technology *Greater Noida, Uttar Pradesh*

Bachelor of Computer Application **2022–2025**
Invertis University *Bareilly, Uttar Pradesh*

Higher Secondary School **2021–2022**
Regency Public School *Sitapur, Uttar Pradesh*

EXPERIENCE

Cybersecurity Intern – *Infotact Solutions* **Feb 2026 – Apr 2026**

- Executed **vulnerability assessments** and compliance audits using OpenVAS, Nmap, and OpenSCAP, uncovering **20+ critical vulnerabilities** mapped to **CVE** identifiers across **3 simulated enterprise environments**.
- Performed network scanning and risk analysis across **5+ systems**, documenting **15+ remediation actions** aligned with **CVSS** scoring that reduced potential attack surfaces by **40%**.
- Spearheaded SOC operations, analyzing **8+ threat models** and **10+ incident reports** using the **MITRE ATT&CK** framework to map attack vectors and sharpen threat detection accuracy.
- Triaged and correlated **500+ log entries daily** to detect suspicious patterns, anomalies, and potential intrusions.
- Authored **25+ vulnerability reports** and proposed mitigation strategies aligned with **NIST CSF** and **ISO 27001** standards.

Ethical Hacking Trainee – *Cetpa Infotech Pvt. Ltd, Noida* **Jun 2024 – Jul 2024**

- Executed **15+ penetration tests** using Metasploit, Wireshark, Nmap, and Burp Suite across different lab environments, targeting attack vectors such as **privilege escalation** and **lateral movement**.
- Detected and exploited **10+ SQLi and XSS vulnerabilities** using WebGoat, simulating real-world attack scenarios and delivering structured remediation findings.
- Deployed **3 honeypots** with active network monitoring, capturing **100+ malicious activity patterns** to study attacker TTPs.
- Simulated **10+ cyberattack scenarios** following the **Cyber Kill Chain** methodology, reducing average threat detection time by **30%** in lab exercises.

PROJECTS

Phishing URL Detection System | *Python, XGBoost, Streamlit [link]*

- Built a **machine learning-based phishing detection system** using XGBoost to accurately classify URLs as legitimate or malicious based on multiple security indicators.
- Engineered and analyzed **26+ URL-based security features** including URL entropy, domain features, and suspicious patterns.
- Created and deployed an interactive **Streamlit web application** enabling real-time URL analysis, returning per-prediction confidence scores to end users.
- Improved overall model performance through **feature engineering, data preprocessing, and hyperparameter tuning** on large-scale datasets.

Real-Time SSH Brute-Force Detection with Splunk SIEM | *Splunk, Kali Linux, Ubuntu [link]*

- Designed a real-time SIEM-based threat detection system using Splunk to monitor and detect SSH brute-force attempts with **95% detection accuracy**.
- Simulated **500+ brute-force login attempts** via Hydra from Kali Linux to validate detection accuracy across attack scenarios.
- Configured log ingestion from `/var/log/auth.log` using Splunk Universal Forwarder for centralized monitoring of **1,000+ events daily**.
- Developed **4 SPL dashboards** and **3 automated alert rules** with UFW firewall integration to block malicious IPs in real time.

Cyber Threat Severity Ranking Platform | *Java, OOP [link]*

- Architected a cyber threat prioritization system using Java and OOP to efficiently manage and process **100+ security incidents** simultaneously.
- Constructed a custom max-heap data structure to dynamically rank threats across **4 severity levels** from LOW to CRITICAL with **O(log n)** time complexity.
- Implemented an automated severity classification mechanism using keyword-based analysis, reducing manual triage time significantly.
- Optimized system efficiency by ensuring high-risk threats are processed first, improving overall sorting performance.

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS
SIEM & Monitoring: Splunk, OpenVAS, Nmap, OpenSCAP
Offensive Tools: Metasploit, Wireshark, Burp Suite Professional, SQLMap, Hydra

CERTIFICATIONS

Introduction to Cybersecurity – **Cisco Networking Academy**
IBM Cybersecurity Analyst – **Coursera**
Cybersecurity (Skill Up) – **GeeksforGeeks**
TCS iON Young Professional Certificate – **TCS**
