SKILL

- Java (Core Java, OOPs Concepts)
- Web Development (HTML, CSS, JavaScript)
- Basic Data Structures and Algorithms
- DBMS

PROJECTS

About the Project:
The Intelligent Finance Tracking and Analysis System project aims to simplify personal financial management. Traditional finance trackers often require human intervention, are unclear, and lack a straightforward method for consumers to monitor their subscriptions and spending. This project offers a user friendly solution to address these limitations, emphasising key features:
- **User-friendly design:** Expenses and subscriptions are easily managed through simple categories like food, travel, and bills. Real-time updates ensure that records are always visible.
- **Customised reports:** Simple reports assist consumers in understanding spending trends.
Future scope includes advanced features such as multi-account integration, predictive planning, AI-driven financial recommendations, investment and loan tracking, and enhanced security measures. With these enhancements, the system will evolve into a comprehensive platform for managing personal finances.

Amazon Clone Website
Developed a responsive Amazon clone website using HTML, CSS, and JavaScript. Implemented key features like product listing, navigation bar, and user-friendly UI to simulate real e-commerce functionality

ACHIEVEMENTS

- Participated in coding workshops during graduation.
- Completed online courses in java and Web Development.

LANGUAGES

- Hindi
- English

HOBBIES AND INTERESTS

- Chess for Strategies
- Watching Movies
-
