Divya Sharma

shharma.divyaa@gmail.com +91-7011159663 linkedin.com/in/shharmadivyaa

Summary

Final-year B.Tech (AI specialization) student with hands-on experience in software development, machine learning, and full-stack web apps. Skilled in Python, Java, PHP, TensorFlow, and OpenCV, with a strong foundation in backend systems and data structures. Actively seeking roles in AI/ML or software development.

Education

Little Flowers Public Senior Secondary School, Delhi *April 2022*
Higher Secondary Certificate (HSC), Central Board of Secondary Education (CBSE)

NOIDA Institute of Engineering and Technology, Greater Noida *Expected June 2026*
Bachelor of Technology (B.Tech) in Computer Science and Engineering – Artificial Intelligence Specialization

Technologies

Languages: Python, Java, PHP, JavaScript, HTML, CSS
Databases: MySQL, MongoDB
Framework: Bootstrap, TensorFlow, OpenCV
Developer Tools: VS Code, Git, IntelliJ IDEA, Jupyter Notebook, Google Colab

Experience

Python Development Intern - CodSoft, Delhi *July - August 2023*

- Programmed 6+ Python automation scripts to automate file handling, data extraction, and formatting tasks, reducing manual workload by approximately 50%.
- Minimized manual effort by 50% through reusable scripts for text parsing, directory traversal, and batch processing.
- Refactored over 500 lines of legacy code into clean, modular Python functions, enhancing maintainability by 35%.

Software Engineer Intern - Care Health Insurance, Gurgaon *June - July 2024*

- Built a client-server social media web application with 1200+ lines of code using HTML, CSS, JavaScript, PHP, and Bootstrap.
- Constructed 4+ backend components such as login/signup system, user connections, content publishing with image support, and dynamic chat functionality using AJAX and PHP sessions.
- Deployed and tested the application locally using XAMPP and debugged backend logic for 10+ use cases.

Projects

Social Web Application *Technologies: HTML, CSS, JavaScript, PHP, Bootstrap*

- Automated an end-to-end social media platform with user registration, profile handling, and secure access control using PHP and MySQL.
- Delivered 5+ interactive features, including content posting, private chat, user subscription mechanism, and a live activity stream with real-time UI updates.
- Designed a responsive UI with over 10 reusable components, ensuring mobile compatibility across 3 screen sizes.
- Wrote 1200+ lines of backend code and optimized SQL queries to reduce load time by 25%.

Face Recognition System *Technologies: Python, OpenCV, Deep Learning (CNN)*

- Designed a dynamic facial recognition system using CNN models and OpenCV, achieving 87% accuracy on test data.
- Integrated age and gender prediction with live webcam feed; handled frame rate of 12 FPS on CPU.
- Utilized pre-trained models with 2M parameters and applied face alignment for more accurate bounding box detection.
- Refactored project into 4 modular scripts with 900 total lines of code for better maintainability and debugging.

Certificates

- **Introduction to Software Engineering** – IBM, Coursera (2023)
- **Building AI Powered Chatbots Without Programming** – Coursera (2023)
- **Deep Learning for Developers** – Infosys SpringBoard (2024)
- **Data Visualization with Python** – Coursera (2024)
- **Artificial Intelligence with Machine Learning** – Oracle (2025)
