EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Business Systems
Noida Institute of Engineering and Technology (NIET), Greater Noida 2022 – 2026

TECHNICAL SKILLS & COURSEWORK

- **Programming Languages:** C/C++, Python, JavaScript,
- **Frameworks & Technologies:** React.js, Node.js, Express.js, MongoDB, REST APIs
- **Databases & Tools:** SQL, Git, Docker, VS Code

INTERNSHIP EXPERIENCE

LLM Post Training Intern

EtharaAI | Jan 2026

- Designed and optimized prompts to enhance model performance across diverse tasks including reasoning, summarization, and QA.
- Analyzed model outputs, identified failure cases, and implemented iterative improvements using feedback loops.
- Applied techniques like instruction tuning and reinforcement learning from human feedback (RLHF) to refine model behavior.

SQL Intern

Celebal Technologies | June 2025 – Aug 2025

- Designed and developed SQL queries using joins, subqueries, aggregations, and built-in functions on real-world datasets.
- Created and managed relational database schemas with primary and foreign keys to ensure data integrity and normalization.
- Debugged query errors and optimized data retrieval for improved accuracy and performance.

C++ Intern

Centre for Railway Information Systems (CRIS), New Delhi | June 2024 – Aug 2024

- Designed, developed, and debugged a C++-based CLI authentication system (“RailwayAuth”) following modular software architecture principles.
- Implemented role-based access control, user registration, login validation, and data verification with 98% authentication accuracy.
- Built a menu-driven application with 8 core modules, enhancing usability and maintainability.

PROJECTS

Sort Viz View

- Built a **sorting algorithm visualization website** using **HTML, CSS, and JavaScript** to show how common sorting algorithms work step by step.
- Visualized **Bubble, Selection, Insertion, Merge, Quick, and Heap Sort**, with options to **change array size and animation speed** for better understanding. Displayed **time and space complexity (Big O)** for each algorithm and used **colors to highlight comparisons and swaps** during sorting.

HelixSOS – Emergency Response App View

- Developed an **emergency response web application** using **React.js** that helps users quickly find **nearby hospitals, police stations, and ambulances** based on their current location.
- Implemented one-click emergency contact feature with automatic SMS/call triggering to pre-saved contacts and integrated turn-by-turn navigation with estimated arrival time using Google Directions API
