Profile

Hi, I'm Dhruv Rathi, a Full Stack Developer who enjoys building modern web applications and solving real-world problems through code. I work with technologies like React.js, Next.js, Node.js, Express.js, PostgreSQL, and MongoDB to create fast, secure, and user-friendly applications. I'm especially interested in backend development, API building, authentication systems, and improving application performance. Along with development, I regularly practice DSA and keep learning modern tools and technologies to grow as a software engineer.

Internships

Full Stack Development Internship (CodeAlpha, Remote, Aug 2025)

- Built and integrated backend APIs for data processing workflows, reducing frontend API response times by approximately 20%.
- Identified and resolved 15+ application bugs across frontend and backend modules, improving platform stability and user experience.
- Collaborated with developers using Git-based workflows, code reviews, and Postman API testing to maintain deployment quality and development efficiency.

Certifications & Achievements

- **AWS Academy Graduate** – Cloud Foundations & Cloud Architecting – Applied AWS deployment fundamentals and MongoDB Atlas integration across backend application projects.
- **Google Cloud** – Data Analytics Certification
- **HackerRank** – Problem Solving & Python Certifications, Problem Solving Certificate

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, SQL
Frontend: React.js, Next.js, Tailwind CSS, Responsive UI Design
Backend: Node.js, Express.js, REST APIs, JWT Authentication, API Security, Rate Limiting
Databases: MongoDB, PostgreSQL, Prisma ORM, Database Transactions, Query Optimization
DevOps & Tools: Docker, Git, GitHub, GitHub Actions CI/CD, Postman, Linux
Testing & Documentation: Jest, API Testing, Swagger/OpenAPI
Cloud & Deployment: AWS, Vercel, Render, MongoDB Atlas
Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks, System Design

Projects

ReviewBot-AI – Code Review System *(React.js, Node.js, Express.js)* *GitHub*

- Built a Banking Transaction Engine with Node.js, Express, MongoDB, and JWT to handle secure account management—used MongoDB sessions and rollbacks to keep transactions consistent even with many operations running at once.
- Created duplicate-proof REST APIs with request validation, cutting transaction errors by 40%, while using double-entry accounting and audit logs to keep financial records accurate and traceable.
- Added Redis caching and rate limiting to improve performance and scalability, then packaged everything with Docker and documented the APIs using Swagger for easier setup and onboarding.

Backend Ledger – Banking Transaction Engine *(Node.js, Express, MongoDB, JWT)* GitHub *Live*

- Built an AI-assisted code review platform with React and Node.js that analyses JavaScript and Python submissions to generate automated feedback, cutting response latency by 35% through OpenAI integration and async handling.
- Developed secure REST APIs with JWT authentication, input validation, and centralised error handling, while designing a responsive React frontend using reusable components and optimised rendering.
- Dockerized backend services and used Postman and Jest for API testing and reliable deployments.

Problem Solving

- Solved 250+ Data Structures and Algorithms problems on LeetCode focused on arrays, hashing, binary search, recursion, linked lists, and problem-solving optimization techniques.
- Strengthened analytical thinking and debugging skills through consistent competitive programming and algorithmic practice.

Coursework

- Distributed Systems, Database Transactions, API Security, Operating Systems, System Design, Object-Oriented Programming
