SUMMARY

Enthusiastic Computer Science student specializing in Data Science, skilled in Python, SQL, Machine Learning, and Data Visualization. Hands-on experience building predictive models, performing Exploratory Data Analysis (EDA), and creating interactive dashboards using Power BI and Matplotlib. Proficient in statistical modeling, feature engineering, and data cleaning to extract meaningful insights from complex datasets.

EDUCATION

B.Tech – CSE (Data Science) 2022 – 2026
Meerut Institute of Engineering and Technology
CGPA: 8.4

Intermediate (CBSE) 2021 – 2022
Success International School, Modipuram, Meerut
Percentage: 82

High School (CBSE) 2019 – 2020
Success International School, Modipuram, Meerut
Percentage: 80

PROJECTS

Fake News Detection (Minor Project)
Tools: Python, Scikit-learn, NLP, Pandas, NumPy
- Built a text classification model using TF-IDF and Logistic Regression to detect fake vs. real news.
- Conducted Exploratory Data Analysis (EDA) and feature engineering to clean and preprocess 5,000+ articles.
- Achieved model accuracy of 92%, improving performance through hyperparameter tuning.
- Demonstrated the real-world application of Natural Language Processing (NLP) and AI for misinformation detection.

SmartStock AI – Intelligent Retail Inventory Management System (Major Project)
Tools: Python, Scikit-learn, XGBoost, Power BI, MySQL
- Designed and implemented a machine learning model to forecast retail product demand.
- Integrated Power BI dashboards to visualize sales trends and optimize stock levels.
- Reduced forecast error rate by 10% by building an end-to-end data pipeline from data collection to visualization, supporting data-driven decisions for sustainable inventory planning.

EXPERIENCE

Data Science Intern – SkillCraft Technology
- Conducted Exploratory Data Analysis (EDA) and created visualizations to uncover customer and marketing insights.
- Applied Decision Tree Classifier for predictive analysis, improving model interpretability.
- Collaborated with senior analysts to generate business insights from structured and unstructured data.

SKILLS

- Programming and Data Tools **:** Python, SQL, MySQL, Pandas, NumPy, XGBoost, Scikit-learn
- Machine Learning and AI **:** Supervised and Unsupervised Learning, Regression, Classification, Clustering, Feature Engineering, Model Evaluation
- Data Visualization and BI Tools **:** Power BI, Excel, Matplotlib
- Big Data Technologies **:** Jupyter Notebook, Google Colab
- Soft Skills **:** Analytical Thinking, Problem Solving, Communication, Data-Driven Decision Making

CERTIFICATIONS

- Data Analytics Job Simulation – Deloitte
- Google Cloud Data Analytics – EduSkills Foundation
- Python – HackerRank
- SQL – HackerRank

KEY ACHIEVEMENTS

Selected in CREATHON at Bharat Shiksha Expo 2025
A national-level innovation event fostering collaboration and creative tech solutions. Worked with teams to present impactful solutions, strengthening innovation and leadership abilities.

DevGathering 2K25 Hackathon
Participated in a 32-hour national-level hackathon, collaborating with a team to develop an innovative tech solution and strengthen problem-solving and teamwork skills.
