Professional Summary

I like to think of myself as a developer with a data scientist's brain. While I specialize in React and JavaScript, I love using NumPy and Pandas to understand how my code impacts the user. At D2I Technology, I didn't just build frontend components; I optimized them until they were 40% faster. I'm looking for my next challenge at Google, where I can build scalable, high-impact solutions that solve real-world problems.

Technical Skills

Programming Languages: JavaScript, Python, Salesforce, Java, HTML5, CSS3
Frontend Technologies: React.js, Tailwind CSS, Bootstrap, Responsive Design, DOM Manipulation, Canvas API, LWC
Backend Technologies: Node.js, RESTful APIs, APEX
Database & Tools: Git, GitHub, npm, Salesforce, WordPress
Data Analytics: NumPy, Pandas, Matplotlib, SciPy
Core Competencies: Data Structures & Algorithms, Object-Oriented Programming, System Design, API Development

Key Competencies

Problem Solving | Performance Optimization | UI/UX Design | Team Collaboration | Leadership | Quick Learner | Analytical Thinking | Client-Focused Development

Education

IMS Engineering College, Ghaziabad — Expected Graduation: 2026
Bachelor of Technology in Computer Science — *CGPA: 6.88/10.0*

Greenwood Senior Secondary School — 2022
Senior Secondary School (Class XII) — *Percentage: 78.5%*

Greenwood Senior Secondary School — 2020
Secondary School (Class X) — *Percentage: 76.8%*

Professional Experience

Frontend Development Intern — June 2024 – August 2024
D2I Technology Pvt. Ltd. — *Remote*

- Developed and deployed 6+ production-ready web tools from scratch, focusing on creating seamless experiences for a growing community of thousands of active users.
- Took ownership of performance by refactoring UI components and implementing code-splitting, which slashed page load times by 40% and made the platform feel significantly snappier.
- Bridge the gap between mobile and desktop users by engineering a smart browser detection system that ensured shareable links worked perfectly, regardless of the device.
- Developed a suite of high-precision finance calculators, translating complex financial logic into an intuitive interface that helped users make real-time investment decisions.
- Boosted user growth by 60% through a custom social media generator that allowed users to preview and share content instantly across 10+ different platforms.
- Designed and built a set of utility tools (Base64 converters and code minifiers) specifically to help fellow developers streamline their daily coding workflows.

Projects

Anonymous Mental Health Support Forum 2023 – 2024

MongoDB, Express.js, React.js, Node.js, WebSockets

- Developed a secure, full-stack MERN platform designed to provide a safe space for anonymous mental health support, prioritizing user privacy through end-to-end encryption.
- Enabled real-time, low-latency connection for 100+ concurrent users by implementing WebSockets, ensuring that people in need of support can communicate without technical delays.
- Streamlined the path to professional help by building an integrated therapist booking system with secure payment processing and automated calendar scheduling.
- Designed with a focus on accessibility and trust, ensuring the backend follows strict data handling standards to keep sensitive user information protected and regulated.
- Maintained 24/7 platform reliability by deploying through a modern CI/CD pipeline, ensuring that support is always available whenever a user reaches out.

Peak Electricity Demand Forecasting System 2025 – 2026

Python, Scikit-learn, XGBoost, React.js, FastAPI

- Engineered a machine learning framework to forecast peak electricity demand for Delhi, addressing the stress on urban grids caused by rapid urbanization and climate variability.
- Developed a high-performance pipeline using Random Forest and XGBoost, achieving superior predictive accuracy over traditional statistical models by capturing complex, non-linear seasonal patterns.
- Processed and cleaned multi-year energy datasets, performing advanced feature engineering on temporal data (lag features, rolling averages) to identify historical demand dependencies.
- Developed an interactive web-based dashboard using React.js and FastAPI, transforming raw predictive data into intuitive visual insights for stakeholders and infrastructure planners.
- Evaluated model reliability using MAE, RMSE, and R^2 scores, ensuring the system serves as a robust decision-support tool for smart grid operations and load management.

Certifications & Training

Data Analytics Using Python – Completed comprehensive training covering NumPy, Pandas, Matplotlib, SciPy for statistical analysis and data visualization

Frontend Development – Advanced training in modern web development practices, responsive design patterns, and performance optimization techniques
