Hands on with Data Science with practical experience in data analysis, data visualization, and machine learning, seeking an opportunity to utilize my skills and gain further experience while enhancing the company's productivity and reputation.

Technical Skills

- Python
- Pandas, NumPy, Matplotlib, Seaborn
- Machine Learning
- Streamlit
- Power BI
- Tools & Platforms: Jupyter Notebook, Google Colab, GitHub, Excel
- Databases (Basic): SQL

Projects

1. **Softpro Analytics – Sentiment & Sales Insights:**

Summer Internship Project | Softpro India Computer Technology Pvt. Ltd. This project was developed during my Summer Internship at Softpro India Computer Technology Pvt. Ltd.
It is a streamlit based dashboard that integrates audio call transcripts with CRM logs to generate actionable insights for counseling and management.
By applying speech-to-text transcription (**Whisper/Vosk**), sentiment analysis (**custom + pretrained models**), and **interactive data visualization** (Plotly, WordCloud), the system provides a centralized platform to improve student engagement, conversions, and decision-making.

Features:

- Audio Upload & Transcription – Convert counselor-student calls into text (Whisper/Vosk).
- CRM Log Integration – Merge transcripts with student data (CSV).
- Sentiment Analysis – Classify calls as Positive, Negative, Neutral.
- Word Clouds & Keywords – Extract frequent concerns like fees, timing, placement.
- Visual Dashboards – Interactive charts (sentiment trends, location-wise insights).

2. **Adaptive Neuro AI – Self-Healing Brain-Computer Interface (BCI):**

Mentor: Mr. Sachin Agrawal
Role: Core Developer (ML & System Integration)

This is my Final Year Project, Adaptive Neuro AI is a PyTorch-based deep learning model (**EEGNet + Temporal CNN**) achieving 67% accuracy on PhysioNet dataset (109 subjects). It is a self-healing Brain-Computer Interface developed as a final-year major project by our team of four members.

The system automatically preprocesses EEG data and incorporates adaptive per-channel normalization to handle noise, signal drift, and subject variability.
A **Streamlit-based GUI** enables EDF file testing and real-time EEG inference with optional cursor-control integration.

3. **DyNum:**

Mentor: Mr. R.K.Singh | Team Size: 4
Key Skills: Python AIML

This is my 2nd year mini project, the goal of our project is to develop an advanced virtual assistant, providing a seamless and natural way for users to interact with their devices. We aim to simplify daily tasks, enhance accessibility, and make technology more user-friendly.
Think of Dynum as your digital buddy who can talk and listen. It's not just about technology, it's about making your computer feel more like a helpful friend.

Internship Experience

- **Robust Results Pvt. Ltd.**: - I have done my internship on Python Basic to Advance with Robustresults Pvt. Ltd. an IIT Kanpur incubated company, for 6 weeks duration from Oct - Nov 2023. I had worked on several projects / research during that time.

- **Softpro India Computer Technologies Pvt. Ltd.**: - I have done my summer training internship on Python with Machine Learning with Softpro India Computer Technology Pvt. Ltd., Duration 45 days from June, 2025 to Aug, 2025 with A++ Grade.

    - Analyzed real-world datasets using Python, Pandas, and NumPy to extract insights.
    - Performed data cleaning, exploratory data analysis (EDA), and feature engineering.
    - Built basic machine learning models for prediction and evaluation.
    - Created visualizations using Matplotlib to communicate findings.
    - Presented insights and recommendations to the team.

Education

Currently Pursuing Bachelor of Technology (CSE–AIML)
Dr. APJ Abdul Kalam Technical University
Sep, 2022 – Jun, 2026 | Expected CGPA: 7.3 / 10

Certification Course

Certificate Course in Python from IIT Kanpur,
Data science using python from QAcademy
