Introduction

Final-year B.Tech Computer Science (AI) student with hands-on experience in full-stack web development. Skilled in building end-to-end applications using JavaScript, Node.js, and databases like MySQL and MongoDB. Developed multiple projects involving REST APIs, frontend interfaces, and backend systems. Seeking full stack developer roles to build scalable web applications.

Education

Noida Institute of Engineering and Technology, B.tech in Cse(AI) Nov 2022 – Jun 2026

Projects

I-HIRE(A drivers hiring patform)
- Built a full-stack web platform to connect drivers with employers
- Developed backend functionality using PHP and MySQL for user management and job listings
- Designed a responsive frontend using HTML, CSS, and JavaScript

Blockchain based charity platform
- Developed a decentralized platform for transparent donation tracking using Ethereum and Solidity
- Implemented smart contracts to securely manage transactions
- Integrated Web3.js with a React-based frontend for blockchain interaction

Student's performance tracker
- Built a system to track and analyze student performance data
- Developed REST APIs using Node.js and Express for data handling
- Used MongoDB for storing and managing structured data

Experience

AI Evaluation Intern May 2026 – Present
Ethara.ai

- Conducting systematic evaluation of AI-generated responses to enhance accuracy, coherence, and contextual relevance
- Analyzing outputs across diverse domains to identify inconsistencies, biases, and logical inaccuracies
- Delivering structured and actionable feedback to optimize model behavior and response quality
- Contributing to the refinement of training datasets for large language models (LLMs) to improve overall performance

Skills

Technical Skills

Languages: Java, Python, JavaScript
Backend: Node.js (Learning), Express.js
Frontend: HTML, CSS, JavaScript, React.js (Basic)
Databases: MySQL, MongoDB
Core Concepts: Data Structures, REST APIs, OOP

Additional Information

Familiar with Git and GitHub for version control
Basic understanding of REST API development and backend architecture
Actively learning Node.js to build scalable backend systems
Experience building end-to-end full stack applications

Certifications

IBM Python for Data Science – Coursera (Feb 2024)

Data Visualization with Python – Coursera (May 2024)

Java Programming Fundamentals – Infosys Springboard (Apr 2024)
