PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science student specializing in Artificial Intelligence & Machine Learning, with hands-on experience in Python, Machine Learning, Deep Learning, NLP, and Data Analytics. Proven ability to design and deploy end-to-end ML pipelines, perform exploratory data analysis (EDA), and build scalable data-driven solutions. Passionate about applying AI/ML techniques to real-world business problems. Actively seeking Data Analyst, AI/ML Engineer, Python Developer, or Software Engineer roles where I can contribute analytical skills, technical depth, and innovative problem-solving.

EDUCATION

B.Tech – Computer Science & Engineering (AI/ML Specialization) | GLA University | Mathura, UP*Expected May 2026*

Relevant Coursework: Machine Learning · Deep Learning · Natural Language Processing · Data Structures & Algorithms · Database Management Systems · Statistics & Probability

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

AI / Machine Learning: Machine Learning, Deep Learning, Neural Networks (CNN), NLP, Predictive Modeling, Scikit-learn, TensorFlow, Keras

Data Analytics: Pandas, NumPy, Matplotlib, Seaborn, EDA, Data Cleaning, Data Visualization, Power BI, Statistical Analysis

Web Development: HTML, CSS, JavaScript, Node.js, REST APIs

Tools & Platforms: Jupyter Notebook, VS Code, GitHub, MySQL, Git

Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration, Leadership

PROJECTS

Predictive Maintenance System Using CNN | Python · TensorFlow · Keras · NumPy · Matplotlib | *Aug 2024 – Nov 2024*

- Engineered a deep learning model using Convolutional Neural Networks (CNN) in TensorFlow/Keras to predict industrial equipment failures from time-series sensor data, enabling proactive maintenance scheduling.
- Implemented a full ML pipeline covering data ingestion, preprocessing (normalization, windowing), model training, hyperparameter tuning, and evaluation — achieving 92%+ classification accuracy on validation data.
- Optimized model performance by analyzing precision, recall, F1-score, and confusion matrices, reducing false-negative failure predictions by an estimated 30%, directly lowering unplanned downtime risk.
- Developed interactive training performance visualizations (accuracy/loss curves) using Matplotlib, enabling data-driven model selection and clear reporting of results.
- Demonstrated applicability of deep learning to predictive analytics in manufacturing and IoT domains, aligning with real-world Industry 4.0 use cases.

Email Spam Detection System | Python · Scikit-learn · NLP · Pandas · Matplotlib | *Jun 2023 – Jul 2023*

- Developed a high-accuracy NLP-based text classification system to detect spam emails using supervised machine learning, processing a dataset of 5,500+ labeled email samples.
- Implemented and benchmarked multiple classification algorithms — Naive Bayes (Multinomial & Bernoulli) and Logistic Regression — achieving a peak accuracy of 98.2% and precision of 97.6% on the test set.
- Engineered NLP feature extraction pipelines using TF-IDF vectorization and Count Vectorizer, transforming raw email text into structured numerical representations for model consumption.
- Analyzed model outputs using classification reports, ROC-AUC curves, and confusion matrices to minimize false positives, ensuring legitimate emails are not misclassified as spam.

- Demonstrated practical business impact: a production-ready version of this model could save enterprise communication platforms significant manual filtering costs and improve user experience.

CERTIFICATIONS & INDUSTRY TRAINING

Data Analytics Job Simulation | Deloitte Australia (Forage) | Remote *Oct 2025*

- Completed applied data analysis and forensic technology tasks simulating real consulting scenarios, including data cleaning, pattern recognition, and structured business reporting using data-driven decision-making frameworks.
- Demonstrated proficiency in translating analytical findings into actionable business insights — mirroring workflows used by Deloitte's Analytics & Cognitive practice.

GenAI-Powered Data Analytics Job Simulation | Forage Virtual Experience Program | Remote *Oct 2025*

- Executed end-to-end analytics tasks including EDA, customer risk profiling, and delinquency prediction using modern Python analytics workflows and Generative AI tooling.
- Developed AI-powered collections strategy reports with business storytelling — demonstrating the practical integration of GenAI in finance and operations analytics.

Full Stack Backend Development – Node.js | GLA University & Coding Blocks | Mathura *Jun – Jul 2024*

- Completed intensive training in Node.js backend development, RESTful API design, server-side architecture, and database integration (MySQL), building a strong foundation in scalable full-stack development.

LEADERSHIP & CO-CURRICULAR ACTIVITIES

- PR & Event Head, Abacus Society, GLA University — Led event promotions, student engagement campaigns, and cross-functional team coordination for 10+ technical and cultural events.
- Coordinated SRIJAN — the annual cultural fest of GLA University — managing large-scale logistics, vendor coordination, and multi-team execution across 3,000+ student participants.
- Organized and managed inter-college technical Hackathons (DSA & Python tracks) in 2023 and 2024 — fostering coding excellence, innovation, and collaborative problem-solving among 200+ participants.
