SUMMARY

Final year Information Technology student (Honors in Cybersecurity) with strong software engineering skills developed through real-world projects and technical leadership. Experienced in building secure, high-performance, user-friendly web applications for real users, with a solid foundation in system design and problem-solving. Known as a collaborative and reliable team member, and currently leading a university blockchain club, mentoring peers and driving technical initiatives. Motivated by curiosity and impact, with a passion for building efficient, secure systems and growing as an engineer.

TECHNICAL SKILLS

Blockchain Development: Decentralized Applications, Smart Contracts, NFTs, Solidity, Ethers.js, Foundry, Hardhat, IPFS
Programming Languages: JavaScript, TypeScript, Java, Python, C, SQL
Frameworks & Tools: Node.js, React.js, Next.js, Firebase, Git, RESTful APIs, Postman, JIRA, Notion
Additional Expertise: Data Analysis, AI-Assisted Development, Cybersecurity Principles, Cryptography

PROFESSIONAL EXPERIENCE

Dehix.org - Blockchain Research and Developer Intern | Certificate **4 Jul 2025 - 4 Oct 2025**

- Developed and tested Solidity smart contracts (ERC-20, ERC-721) using Hardhat and Foundry, with a focus on unit/fuzz testing, gas optimization, and automated deployments.
- Built and scripted contract interactions using Ethers.js and Forge, improving efficiency and reliability of on-chain testing workflows.
- Represented the organization at blockchain hackathons and Web3 events, building prototype dApps and researching emerging technologies like Layer-2 scaling and account abstraction.
- Contributed to the design of scalable, secure smart contract architectures, ensuring best practices in code quality and cryptographic security.

Skillrisers Infotech Pvt .Ltd - Data Analyst Intern | Certificate **29 Jan 2024 - 18 Apr 2024**

- Analyzed real-world datasets using Python (Pandas, NumPy) and SQL, performing data cleaning, outlier handling, and visualization with Matplotlib and Seaborn.
- Trained and evaluated predictive models using Scikit-learn, applying concepts of EDA, feature engineering, model evaluation, and data preprocessing.

HIGHLIGHTED PROJECTS

Foundry Lottery - Automated Randomized Lottery System | GitHub **26 Oct 2025 - 13 Nov 2025**

- **Technologies Used:** Solidity, Foundry, Chainlink Automation and VRF, Slither, Sepolia Testnet
- Engineered a fully automated decentralized lottery using Foundry, integrating Chainlink VRF for verifiable randomness and Chainlink Automation for scheduled draws, while designing and executing comprehensive unit, fuzz, and integration tests, creating deployment/interaction scripts in Solidity, and optimizing contracts for gas efficiency and security best practices via Slither analysis.

LegalLedger - Legal Document NFT Platform | GitHub · Live Demo **1 Oct 2025 - 22 Oct 2025**

- **Technologies Used:** Solidity, Hardhat, Next.Js, OpenZeppelin, ERC721, IPFS, Pinata, Sepolia & Amoy
- Developed a Web3 platform that mints legal documents as NFTs, implementing PDF upload and automated conversion into JSON-based metadata while securely storing data on IPFS (Pinata) to ensure document authenticity, tamper-proof ownership, and decentralized verification.

DeFiSalary - Automated Payroll (Alchemy Certified) | GitHub · Live Demo · Alchemy **7 Mar 2025 - 1 Apr 2025**

- **Technologies Used:** Solidity, Hardhat, Chainlink Automation, Ethers.js, Next.Js, Sepolia Testnet
- Designed an automated monthly payroll system for up to 50 employees using Ethereum smart contracts, reducing manual processing time by 90% and ensuring reliable, on-time ETH salary transfers with over 99% accuracy, while implementing Chainlink Automation for scheduled payouts, building real-time dashboards for contract balances, salary history, and employee status, and developing the end-to-end frontend with Next.js and TailwindCSS.

SamratAi.com | Live Site **9 Apr 2025 - 22 Oct 2025**

- Single-handedly built and deployed a freelance platform for a Data Science & ML instructor using Next.js and TailwindCSS, delivering responsive UI, dynamic routing, strong SEO, and automated Vercel pipelines for scalable, high-performance delivery.

Labro.in | GitHub · Live Site **16 Mar 2025 - 5 Apr 2025**

- Solely designed, developed, and launched a Next.js + Firebase web platform connecting users with local service providers, featuring real-time data, location based filtering and distance calculation, authentication, optimized and secure database design, high-performance and easy to navigate UX, attracting 100+ users within two months.

EDUCATION

Bachelor of Technology - Information Technology (Honours in Cybersecurity)
IMS Engineering College Ghaziabad · Average GPA: 8.3/10 **Nov 2022 - Present (Dec 2026 Expected)**

Relevant Coursework

• Foundry Fundamentals - Cyfrin Updraft · Certificate • Ethereum 7 week bootcamp - Alchemy University · Certificate
