Lovesh Bhalla

Ghaziabad, Uttar Pradesh, India — +91-9958844933 — loveshbhalla30@gmail.com — LinkedIn — GitHub

Summary

Results-driven Data Analyst with hands-on experience analyzing **150K+ records** using **SQL, Python, and Power BI**. Proficient in data cleaning, exploratory data analysis (EDA), statistical analysis, data visualization, and KPI dashboard development. Experienced in extracting actionable insights to support data-driven business decisions. Seeking a data analyst role to apply analytical and problem-solving skills in a professional setting.

Technical Skills

Programming Languages: Python, SQL
Data Analysis & EDA: Pandas, NumPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Data Validation, Feature Engineering
Data Visualization: Power BI, DAX, Data Modeling, Matplotlib, Seaborn
Database: MySQL, SQL Joins, Window Functions, CTEs, Aggregations, Subqueries
Spreadsheet: Microsoft Excel, Pivot Tables, VLOOKUP, Power Query
Other Tools: GitHub, Jupyter Notebook

Experience

Data Science Intern — Codecraft Infotech (Remote)

- Conducted exploratory data analysis (EDA) on Titanic dataset using Python (Pandas, Matplotlib, Seaborn) to identify survival patterns
- Performed data cleaning by handling missing values, outliers, and performed feature engineering (e.g., age group segmentation)
- Derived actionable insights: higher survival rates among females, first-class passengers, and children under 10

Data Analytics Intern — CRC Training, ABESIT

- Performed data analysis on solar flare dataset using SQL aggregations, GROUP BY, and time-series exploration techniques
- Identified peak solar activity periods and flare intensity patterns across multiple years and months
- Built interactive Power BI dashboards to visualize event trends, flare types, and active region statistics

Projects

Ride Booking Analytics Dashboard GitHub

Tools: SQL, Python, Power BI, DAX, Pandas, NumPy, Matplotlib

- Processed and cleaned **150,000+ ride booking records** using SQL queries and Python (Pandas), resolving missing values and data inconsistencies
- Performed exploratory data analysis (EDA) to uncover demand patterns, cancellation trends, and revenue distribution
- Developed an **interactive Power BI dashboard** tracking 5+ KPIs: total bookings, revenue, completion rate, and cancellation rate
- Identified key insight: **62% ride completion rate** with driver cancellations (**18%**) significantly higher than customer cancellations (**7%**)
- Recommended data-driven strategies to improve driver availability during peak hours and reduce cancellation rates

Food Delivery Performance Analysis GitHub

Tools: SQL, Python, Power BI, DAX, Pandas, Seaborn

- Cleaned and preprocessed food delivery dataset using Python and SQL, resolving missing values, duplicates, and invalid price entries
- Conducted statistical analysis on pricing, delivery time, and cuisine trends to identify performance drivers
- Engineered a **Value-for-Money metric** and built a Power BI dashboard with KPIs for operational decision-making
- Key finding: **minimal correlation between price and ratings**; faster delivery improved ratings by **˜0.7 points**

Space Weather Events Analysis GitHub

Tools: SQL, Python, Power BI, Pandas, Matplotlib

- Cleaned and preprocessed solar flare dataset using Python and SQL for time-series and trend analysis
- Performed **time-series analysis** to study solar flare intensity trends and seasonal activity patterns
- Built an **interactive Power BI dashboard** visualizing flare categories, event trends, and active solar regions
- Identified **peak solar activity in 2024** with dominance of specific flare categories using data-driven analysis

Education

Bachelor of Technology (B.Tech) in Information Technology 2022 – 2026
ABES Institute of Technology, Ghaziabad, Uttar Pradesh
