TECHNICLE SKILLS

PROGRAMMING SKILLS: Java SE (Standard Edition), Object-Oriented Programming (OOP) concepts, Exception Handling, Collection Framework (List, Set, Map, etc.), Multithreading & Concurrency (basic understanding), File I/O and Serialization, Java 8+ features (Lambdas, Streams, Optional, Functional Interfaces), Generics, knowledge of JVM, JRE, and JDK.
FRAMEWORK & SERVICES: SQ, Spring boot, Spring MVC, Spring Data JPA, Hibernate / JPA (ORM), RESTful Web Services (using Spring Boot), JSON and XML Processing.
IDE AND TOOLS: Eclipse, VS code, dev C++, Maven, STS(Spring Tool Suite), Postman**.**

ACHIEVEMENTS

HackerRank: 5Star https://www.hackerrank.com/profile/sarveshyadav_211

Leetcode: 125Plus Question Solve https://leetcode.com/u/Sarvesh_Coder

CodeCafe: 500Dificulty achived. https://www.codechef.com/users/sarvesh888708

EXPERIANCE

Qspider/Jspider. Noida, India

Java Full Stack Trainee 25/08/2025 – Present

- Gaining hands-on experience in Core Java concepts including OOP, collections, and exception handling
- Developing dynamic web applications using JSP, Servlets, HTML, CSS, and JavaScript
- Implementing database connectivity with JDBC and SQL to manage and manipulate data efficiently
- Building end-to-end mini projects following Java Full Stack best practices
- Enhancing problem-solving and debugging skills to optimize application performance
- Collaborating with peers and mentors to understand real-world development workflows

EDUCATION

Bachelor of Technology Computer Science Engineering(AI&ML) from IMS Engineering College Ghaziabad affiliated with AKTU University, Lucknow.

PROJECTS

Shape based game

- Techstacks using Java, Class, object, constructor, inheritance, polymorphism, upcasting, method overriding and overloading, interface have a relationship.
- Designed and developed an interactive educational game for students (Grades 6–12) to enhance understanding of **2D and 3D geometric shapes**.
- Built a **user-friendly GUI** that allows students to explore and interact with shapes through clickable elements.
- Applied **Object-Oriented Programming (OOP)** principles to ensure a modular and scalable design.
- Implemented advanced OOP concepts including **has-a relationship (composition)**, **method overriding**, **method overloading**, **constructor overloading**, **inheritance**, and **upcasting**.
- Created a **robust and extensible codebase** that can be easily expanded to include new shapes and features.

Online Library Management System

- Built a web application to manage books, users, and transactions efficiently.
- Implemented Java, JSP, Servlets, JDBC, HTML, CSS, and JavaScript for full-stack functionality.
- Reduced manual book tracking effort by 50%, enabling easy search and borrowing of books.
