CAREER OBJECTIVE

I am Sunny Choubey, passion for leveraging my expertise in AI and ML with experience in project management to drive value for forward-thinking organizations. I bring a strong commitment to excellence and a proactive approach to problem-solving. I have honed my skills in teamwork and communication

WORK EXPERIENCE

Data Science Intern | Summer 2025 • Internship Aug 2025 - Nov 2025
Lumiq.ai, Noida

During my internship at Lumiq.ai, I worked as a Data Science Intern, where I gained hands-on experience in data preprocessing, exploratory data analysis, and applying machine learning models to solve business problems. I collaborated with the team on real-world datasets to build scalable AI-driven solutions, developed statistical insights, and enhanced my skills in Python, data visualisation, and model evaluation.
Worked on real-world data science projects, applying machine learning techniques for analysis and prediction.
Collaborated with team members to preprocess, clean, and analyse datasets for building scalable AI solutions.
Gained hands-on experience in Python, statistical modelling, and visualisation tools.
Contributed to delivering data-driven insights and supported automation in analytical workflows.

Internship. • Internship Oct 2022
Kanpur Central Wagon Bogi Depo, Kanpur

Completed industrial training in kanpur Central Wagon bogi depo
Completed industrial training at Kanpur Central Wagon Bogie Depot, gaining hands-on experience in wagon maintenance, inspection, and repair processes. Learned about the mechanical structure of railway bogies, including axle alignment, brake systems, suspension, and wheel assembly. Worked on overhauling techniques, safety protocols, and quality control measures to ensure efficient railway operations

EDUCATION

B.Tech, Computer Science & Engineering 2023 - 2026
JSS Academy of Technical Education, Noida

CGPA: 7.13/10

Diploma, Mechanical Production. 2020 - 2023
Government Polytechnic Kanpur

Percentage: 70.39%

Secondary (X), CBSE 2020
Kardiya Vidyalaya New Catt Allahabab

Percentage: 51.01%

PROJECTS

DRL job shop ↗

Oct 2025 - May 2026

This project was developed as a Final Year Project with the objective of addressing the Job Shop Scheduling Problem (JSSP) using Deep Reinforcement Learning (DRL) techniques. Job shop scheduling is a well-known NP-hard optimisation problem commonly encountered in manufacturing and production systems, where traditional heuristic and rule-based methods often fail to adapt to dynamic and complex environments.

AI-Powered Smart Operating System (Mini OS Simulation) ↗

Apr 2025 - Jan 2026

Developed a miniature operating system that integrates artificial intelligence (AI) to enhance user interaction, resource management, and task scheduling. The system simulates key operating system functions (e.g., process management, memory allocation) while leveraging AI to predict user behavior, optimize performance, and provide intelligent assistance. The work will be completed in 6 months

NeuroSpace AI AI-Powered Visual Thinking & Idea Mapping System ↗

Mar 2026 - Present

NeuroSpace AI is an intelligent visual thinking platform that transforms human ideas into interactive knowledge graphs using artificial intelligence. It enables users to explore, organise, and manipulate complex thoughts in a visual and intuitive way.
This project combines AI reasoning, graph visualisation, and human-computer interaction to bridge the gap between how humans think and how computers process information.

CKYC SFTP Incident Analysis ↗

Mar 2026

This Colab notebook is focused on CKYC SFTP Incident Analysis. It involves loading and processing SFTP connection logs to identify patterns in successful and failed operations. The analysis includes

ML project ↗

Mar 2025 - Apr 2025

The rise in diabetes cases globally has made early detection more critical than ever. This project aims to leverage the power of machine learning to predict the likelihood of diabetes in patients based on various health parameters. By analyzing patterns in medical data, the system can assist in early diagnosis and prompt medical attention.
The dataset used for this project is the well-known PIMA Indian Diabetes Dataset, which includes information from female patients such as age, BMI, glucose level, insulin levels, blood pressure, and more. These features serve as inputs to train and evaluate several machine learning models.
and there are more project in the forder

SKILLS

- Python
- SQL
- Deep Learning
- Natural Language Processing (NLP)
- Linux
- Artificial intelligence
- MySQL
- Data Science
- Node.js
- Computer Networking
- Machine Learning
- Neural Networks
- Data Analytics
- R Programming
- Shell Scripting

EXTRA CURRICULAR ACTIVITIES

- Sketching for any frictional characters
- Playing different type of team sports like volleyball basketball football badminton etc
- Playing some strategic games like chess and sometime video games
