Suhail Khan

Backend Developer

+91-8882995170 suhailkhan6669@gmail.com linkedin.com/in/suhailkhan-india github.com/suhailkhhhan

Professional Summary

Backend-focused Java developer specializing in scalable REST APIs using Spring Boot, MySQL, and Redis. Built backend systems with caching, rate limiting, and authentication, improving API performance and reducing database load. Strong understanding of clean architecture and backend system design.

Skills

Languages: Java, Python
Backend: Spring Boot, REST APIs, Hibernate (JPA)
Databases: MySQL, PostgreSQL, Redis
Security & Architecture: JWT Authentication, OAuth2, MVC, Exception Handling
Tools: Git, Maven
Frontend Basics: HTML, CSS, JavaScript

Projects

- **URL Shortener Service (Bitly-like)** | *Java, Spring Boot, MySQL, Redis* **Jan 2026 – Feb 2026**
  - Solved the problem of long and inefficient URLs by designing a scalable URL shortening system using Base62 encoding for compact link generation.
  - Engineered REST APIs to handle URL creation, redirection, and analytics, ensuring fast and reliable access.
  - Reduced database load and improved response time (˜40%) by integrating Redis caching for frequently accessed URLs.
  - Prevented system abuse and traffic spikes by implementing rate limiting using IP-based request tracking.
  - Handled custom short URL generation with uniqueness validation and collision handling.
  - Built analytics module to track user clicks and identify top-performing links for insights.
  - **GitHub:** github.com/suhailkhhhan/url-shortener-springboot

- **MediFlow — Medical Management System** | *Java, Spring Boot, Hibernate, MySQL* **Mar 2025 – June 2025**
  - Addressed inefficiencies in manual medical record management by developing a centralized backend system for patients, doctors, appointments, and billing.
  - Designed RESTful APIs to enable structured and efficient data flow between system components.
  - Ensured secure access control by implementing role-based authentication for admin, doctor, and staff users.
  - Maintained data consistency across multiple entities by designing a normalized relational database schema.
  - Improved system reliability by adding input validation and centralized exception handling.
  - Enabled real-time data operations by integrating backend APIs with frontend components.
  - **GitHub:** github.com/suhailkhhhan/Medi-Flow

Work Experience

- **Java Developer Intern** **Feb 2025 – Mar 2025**
  Oasis Infobyte (Remote)
  - Built Java-based applications applying object-oriented design principles for modular and maintainable code.
  - Implemented authentication and transaction handling logic simulating real-world banking operations.
  - Improved code efficiency by restructuring logic into reusable components, reducing redundancy.

Education

- **B.Tech in Computer Science and Engineering** **2022 – Present**
  Raj Kumar Goel Institute of Technology and Management, Ghaziabad

Certifications

- Oracle Java Foundations Certification (2025)
- Web Design Certificate – Udemy (2025)
