Summary

Passionate Software Engineer with a strong foundation in Python, Java, and web development. Skilled in problem-solving, data structures, and algorithms. Eager to contribute to a dynamic team and build scalable applications.

Aspiring software engineer with a passion for developing efficient, scalable, and user-friendly applications. Proficient in [mention key programming languages, e.g., Python, Java, JavaScript] and experienced in [mention relevant technologies, e.g., web development, cloud computing, AI]. Seeking to leverage problem-solving skills and innovative thinking to contribute to a dynamic development team, drive technological advancements, and enhance user experiences.

Education

H.R. Institute Of Technology Bachelor of Technology
Computer Science and Engineering

Ingraham Inter College 12th
PCM

Ingraham Inter College 10th
PCM

Projects

1. Fake News Headline Generation **Sep 2025**

created a model using natural language processing (NLP) to create and recognise false news headlines from a dataset. Technologies: NLTK, TensorFlow, Keras, and Python Tokenisation, text preprocessing, and the development of a sequence-to-sequence model for generation were implemented. Over 90% accuracy in identifying phoney headlines was attained.

2. ATM System **Oct 2025**

I developed a **console-based ATM System** using **Java** to simulate basic banking operations.

This project provides an interactive menu-driven interface where users can perform common ATM transactions such as: • Balance Inquiry

- Cash Deposit
- Cash Withdrawal
- Exit Functionality

The system is designed using **Object-Oriented Programming (OOP)** principles. A dedicated BankAccount class manages account balance and transaction methods, while the ATM interface handles user input and displays options through a loop-based menu.

Proper validation is implemented to ensure secure withdrawals by checking insufficient balance conditions.

This project demonstrates my understanding of **Java fundamentals, encapsulation, conditional statements, loops, and user interaction using Scanner**.

3. Student Grade Calculator (SGC) **Nov 2025**

Developed a **Student Grade Calculator (SGC)** in Java to compute students' total marks, percentage, and final grade based on entered subject scores. This project showcases Java fundamentals, conditional logic, and user input handling through a simple console-based application.

Skills

Programming Languages:
Python, JavaScript, Java, C++

Frameworks:
React, Angular, Node.js, Spring Boot Painting

Databases:
MySQL, PostgreSQL, MongoDB Cricket

Version Control:
Git, GitHub, GitLab

Training

1.Softpro India private limited

Softpro India – A+ Certified Training
Completed an A+ certified training program in Python and Web Development (HTML, CSS, JavaScript). Gained hands-on experience by working on multiple practical tasks and mini projects. Successfully received certification after program completion.

2. Acciojob Training Institute

AccioJob – Java Web Development Training
Currently pursuing training in Java Web Development, focusing on Data Structures and Algorithms (DSA), Core Java, and front-end technologies like HTML, CSS, and JavaScript. Building strong problem-solving skills through regular coding practice and hands-on projects.

Certifications

Python and Web Development **Aug 2024**
Softpro private limited

Introduction to Generative AI **Oct 2025**
Google Cloud

Data Analytics job Simulation **Oct 2025**
Deloitte

AI Skills Passport **Nov 2025**
Microsoft

Gemini Certified Student **Nov 2025**
Google
