SUMMARY

Final-year CS undergraduate (RKGIT, Ghaziabad, Expected May 2026) with hands-on expertise in AI/ML, deep learning, and computer vision. Built production-grade systems spanning real-time pose estimation, multi-modal biometric authentication, and neural image stylization using Python, PyTorch, TensorFlow, and OpenCV. Experienced in full-stack development (React, FastAPI, MySQL) and proficient in DSA fundamentals. Targeting SWE / AI-ML Engineering roles (2026).

EDUCATION

— **Raj Kumar Goel Institute of Technology Ghaziabad** *Expected May 2026*

Bachelor of Technology in Computer Science and Engineering

TECHNICAL SKILLS

— **Languages:** Python, SQL, JavaScript (basic)
— **AI/ML & Deep Learning:** PyTorch, TensorFlow, scikit-learn, CNNs, supervised/unsupervised learning, transfer learning, hyperparameter tuning, model evaluation
— **Computer Vision:** OpenCV, MediaPipe, pose estimation, face recognition, real-time inference
— **Web & Backend:** React, Node.js, FastAPI, REST APIs, MySQL, MongoDB, Streamlit
— **CS Fundamentals:** Data Structures & Algorithms, OOPs, DBMS, Operating Systems
— **Tools:** Git, GitHub, Jupyter Notebook, Linux

EXPERIENCE

Bizongo (Smartpaddle Technology Pvt. Ltd.) — Technology Intern *July 2025 – Aug 2025*

— Designed and executed 30+ functional test cases to validate B2B packaging platform outputs, identifying 5 critical system inconsistencies escalated to the engineering team.
— Analyzed application logs and debugging traces to isolate root causes of system failures, reducing average issue resolution turnaround in agile sprint cycles.
— Maintained version-controlled technical documentation in Git, ensuring traceability across 3 system modules and improving onboarding clarity for new team members.

PROJECTS

Kinetic Master — AI-Based Physiotherapy Monitoring System

— Engineered real-time exercise monitoring using OpenCV, MediaPipe Holistic, and TensorFlow, achieving 85–90% classification accuracy at <0.5s CPU inference latency.
— Optimized pose estimation pipeline, reducing false-positive correction alerts by ~30% vs threshold-only baseline via joint-angle heuristics.
— Delivered full-stack application (React + FastAPI REST API + MySQL) with doctor dashboard for session analytics, rep tracking, and recovery trend prediction.

AI Smart Attendance System — Face & Voice Recognition

— Built multi-modal biometric attendance system (Python, OpenCV, deep face recognition) achieving 92%+ identification accuracy across 50+ enrolled students.
— Implemented dual-layer authentication (face + voice) to prevent proxy attendance and eliminate single-factor spoofing vulnerabilities.
— Deployed Streamlit role-based dashboard (Teacher/Student) with subject-wise session logs, CSV export, and enrollment management for 5+ subjects.

AI Neural Style Transfer

— Built image stylization pipeline using Neural Style Transfer with VGG-19 feature extraction, optimizing combined content + style loss for high-fidelity artistic output.
— Reduced stylization time by 40% vs naive loop via L-BFGS optimizer tuning and layer selection; supported customizable style weight parameters.
— Deployed end-to-end stylization demo on HuggingFace Spaces / Streamlit Cloud, enabling real-time VGG-19 inference on user-uploaded images with <3s turnaround.

CERTIFICATIONS

— MERN Stack Developer — Apna College (Delta)
— AI/ML Engineer — Apna College
