Professional Summary

Final-year Computer Science (Data Science) undergraduate with strong foundation in **Java, OOP, Data Structures & Algorithms, and SQL**. Experienced in building backend systems with modular design, file-based persistence, and transaction logic. Familiar with MongoDB, JavaScript, and REST API. Aspiring **Software Engineer** eager to contribute to backend development and scalable system design.

Skills

Languages: Java, Python, SQL, JavaScript
Backend & Web: OOP, Java Collections Framework, Exception Handling, File I/O (BufferedReader/Writer), REST API, HTML, CSS
Database & Cloud: Oracle SQL, MongoDB, Firebase
Tools & Platforms: Git, Jupyter Notebook
Core Concepts: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Unit Testing

Education

Raj Kumar Goel Institute of Technology, Ghaziabad *2022 – 2026*
Bachelor of Technology in Computer Science & Engineering (Data Science)
CGPA: 7.63 (Till 7th Semester)
Relevant Coursework: DSA, OS, OOP, DBMS, Computer Networks, Data Analytics

Experience

Infosys Springboard – Data Visualization Intern (Virtual) *Aug 2025 – Oct 2025*

- Performed **ETL operations** — cleaned and pre-processed raw datasets using **Python (Pandas)**, handling missing values, duplicates, and type inconsistencies to produce analysis-ready data.
- Built interactive **Power BI dashboards** with drill-down filters and KPI tracking, improving insight extraction time by **30%** for business stakeholders.
- Developed a **Streamlit web application** with dynamic filtering and integrated **Firebase authentication & authorisation** for secure user access.

HCLTech – Data Engineering Trainee *Nov 2024 – Mar 2025*

- Wrote optimised **SQL queries** (joins, aggregations, subqueries) and managed NoSQL records in **MongoDB** to support data transformation and backend processing tasks.
- Processed and transformed structured datasets using **Python (Pandas, NumPy)**, automating repetitive data-handling workflows as part of an **agile** team.
- Created **Tableau dashboards** to visualise processed data, summarising key trends and findings for business reporting.

Projects

Banking Management System (Java)

- Designed a **modular banking application** with account management, PIN-based authentication, and fund transfers, applying **OOP principles** (inheritance, encapsulation, polymorphism) for clean system architecture.
- Implemented a **persistent data layer** using `BufferedReader`/`BufferedWriter` and **Java Collections Framework** (`ArrayList`) for transaction history, simulating a backend storage system without a database engine.
- Applied **exception handling** and OOP design patterns to ensure loose coupling, high cohesion, and robust error management across all modules.

Voyana – Interactive Global Travel Visualization

- Performed **data preprocessing** on a **50K+ record** dataset using Python (Pandas), resolving nulls, duplicates, and schema inconsistencies to produce analysis-ready data.
- Developed an interactive **Streamlit web application** with multi-level filtering and **Firebase authentication & authorisation**, demonstrating end-to-end full-stack awareness (data layer + auth + UI).

Certifications & Achievements

- JPMorgan Chase & Co. – Software Engineering Job Simulation, Forage (2025) | *Spring Boot, Kafka, REST APIs, JPA, H2*
- NASSCOM EPBL – Led a team of 4 in Power BI Analytics programme (Mar 2025)
- NPTEL: Software Testing (Sept 2024)
- TCS iON Career Edge – Young Professional (Apr 2025)
