EDUCATION

AKTU University — B. Tech, Computer Science (IoT) Expected 2026
Percentage: 62%

St. Teresa's Academy, Ghaziabad — 12th Grade (Mathematics) 2022
Percentage: 76.8%

St. Teresa's Academy, Ghaziabad — 10th Grade 2020
Percentage: 74.6%

PROFESSIONAL SUMMARY

- B. Tech (Computer Science) with one year of experience in Analytics.
- Proficient in machine learning algorithms: Linear & Logistic Regression, KNN, Decision Trees, Random Forest, XGBoost, ANN, SVM, and Naïve Bayes.
- Hands-on experience in Text Analytics using Natural Language Processing (NLP).
- Certified in Data Science Specialization (R & Python) and Data Analytics & Visualization (Excel, SQL, Tableau) from Analytixlabs, Noida.
- Experience with analytics tools: Python, SQL, Power BI, and Excel across pharma, healthcare, retail, telecom, travel, and banking sectors.

TECHNICAL SKILLS

Analytics Tools: Python, Power BI, Tableau, SQL, Excel.

Techniques: Statistical Methods (Z/T-test, ANOVA, Chi-square, Correlations), Regression, Classification, Segmentation (RFM, K-Means), Forecasting (Time Series, ARIMA), NLP, ANN.

Applications: EDA, Predictive Modelling, Visualization, Dashboards, Data Preparation, Statistical Analysis.

Others: C, C++, HTML, Java, MERN Stack, JavaScript.

RECENT ANALYTICS PROJECTS

Classification of Incoming Phone Text Messages
Tools & Techniques: Python, R, Artificial Neural Networks (ANN)
Objective: Analysed call message summaries and classified tickets into one of six categories, enabling faster departmental response and reducing manual triage time.

Predicting Medical Appointment No-Show
Tools & Techniques: Python, R, Logistic Regression, Random Forest
Objective: Identified key reasons for patient appointment no-shows and influencing factors to support hospital scheduling improvements.

Customer Segmentation for Marketing Strategy
Tools & Techniques: R, K-Means Clustering
Objective: Developed customer segmentation model to define targeted marketing strategies and map relationships between goods and market segments.

Demand Forecasting for Medical Equipment Sales
Tools & Techniques: R, ARIMA (Auto-Regressive Integrated Moving Average)
Objective: Forecasted future sales using 3 years of historical data, delivering actionable inventory and supply chain insights.

CERTIFICATIONS & TRAINING

Data Science Specialization using Python & R
ANALYTIXLABS, Noida

Certified SAS Analyst
ANALYTIXLABS, Noida

Data Analytics & Visualization
ANALYTIXLABS, Noida — Excel, VBA, SQL, Tableau

Industry exposure across: Retail, Banking, Telecom, Pharma, Healthcare, and Travel through assignments and live projects.
