CAREER OBJECTIVE

ECE undergraduate seeking an entry-level opportunity in manufacturing, tool & die, embedded systems, or industrial technology domains. Interested in applying engineering fundamentals, problem-solving abilities, and technical skills in the automotive industry.

WORK EXPERIENCE

AI Internship| Evnek Technologies| Remote

Feb 2026-April 2026

- Developed scalable backend services using Python and Node.js for AI-powered applications
- Integrated APIs and optimized application workflows for improved performance and reliability
- Worked on real-time AI modules including chatbot systems and recommendation features
- Collaborated with cross-functional teams using Git-based version control and Agile methodologies
- Debugged, tested, and enhanced application performance for production-ready deployment
- Implemented prompt engineering and LLM integration for intelligent application workflows
- Contributed to dynamic and data-driven platform features with focus on scalability and usability

EDUCATION

B. Tech – Electronics and Communication Engineering — Expected Graduation: 2026
University Institute of Technology, RGPV, Bhopal — CGPA:7.66

Class 12 (CBSE) — 2021
Hema Higher Secondary School, Bhopal — 91%

Class 10 (CBSE) — 2019
Hema Higher Secondary School, Bhopal — 84%

SKILLS

Core Technical Skills: Semiconductor Devices & Diodes, BJT and MOSFET Characteristics, Analog and Digital Electronics, Boolean Algebra & Logic Gates, Combinational and Sequential Circuits, Embedded C programming, Microcontroller Architecture & Interfacing, Sensors, Actuators &IOT Communication Protocols, Manufacturing Processes, Engineering Drawing, Industrial Automation Basics, Quality Control Basics, Problem Solving &Technical Analysis

Embedded Platform & Tools: Arduino UNO R4 Wifi, MATLAB, CAD Basics.
Programming Languages: C, Python, Java
Software &IDEs: VS Code, Juypter Notebook, Google Collab, Pycharm, IntelliJ IDEA, MS Office
Soft Skills: Teamwork, Effective Communication, Time Management, Quick Learner, Adaptability.

PROJECTS

Sorting Visualizer | Java, Swing

•Developed an interactive Java GUI application to visualize multiple sorting algorithms in real time
•Implemented Bubble Sort, Selection Sort, Merge Sort, and Quick Sort visualizations
•Enabled step-by-step execution to demonstrate algorithm behavior and performance comparison
• Improved understanding of algorithm complexity and data structure concepts through graphical representation

IoT-Based Weather Monitoring System Using NodeMCU & Blynk App Powered by Solar Cell

- Developed a real-time IoT-based weather monitoring system using NodeMCU, DHT11 sensor, Blynk App, and solar power integration
- Implemented wireless data transmission for monitoring temperature and humidity remotely through the Blynk mobile application.
- Integrated a solar cell power source to improve energy efficiency and enable sustainable system operation.
  Ensured stable sensor readings, reliable Wi-Fi communication, and real-time environmental data updates.
- Worked with embedded systems, IoT communication, sensors, and basic power management concepts.

EXTRA-CURRICULAR ACTIVITIES

- Cleared the First Stage of NTSE in 2018.
- Practicing Data Structures and Algorithms on LeetCode and Coding Ninjas.
- Strong understanding of OOPs, problem-solving, and software development fundamentals.
- Familiar with Git workflows, debugging, and collaborative development practices
