Summary

Results-driven final-year B.Tech student in Electronics and Communication Engineering with proven experience designing and deploying full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js). Proficient in building RESTful APIs, implementing JWT-based authentication, managing global state with Redux Toolkit, and integrating third-party services such as Gemini AI and ImageKit. Demonstrated ability to deliver responsive, scalable, and user-focused applications through real-world projects. Actively seeking backend or full-stack development roles where I can contribute immediately and grow as an engineer.

Education

JSS Academy of Technical Education — Noida, India
B.Tech in Electronics and Communication Engineering — *2022 – 2026*

St. Xavier's High School, Fatehpur — Fatehpur, India
Class XII – 87.4% — *2019 – 2020*

Projects

AI-Powered Resume Builder | *MERN Stack, Gemini API, Redux Toolkit, JWT, ImageKit* — 2025

- Developed a full-stack AI-powered resume generation platform using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Designed and implemented RESTful APIs for user authentication and end-to-end resume management workflows.
- Implemented secure authentication using JWT and Bcrypt, ensuring protected user sessions.
- Integrated Gemini AI API for intelligent content suggestions, improving resume quality for users.
- Managed global application state using Redux Toolkit, improving scalability and reducing prop-drilling.
- Integrated ImageKit for image enhancement features including background removal and auto-focus cropping.

PhonePe Backend Clone | *Node.js, Express.js, MongoDB, Mongoose, JWT, Bcrypt, Swagger* — GitHub ↗

- Built a production-style FinTech backend using Node.js and Express.js, simulating core PhonePe features including user authentication, peer-to-peer transfers, and utility bill payments.
- Implemented JWT-based stateless authentication with Bcrypt password hashing and a strict 4-digit MPIN verification layer enforced on all outbound transactions.
- Engineered dynamic UPI ID generation on user registration (e.g., `username@phonepe`) and enabled flexible P2P money transfers via both phone number and UPI ID lookup.
- Developed wallet management features including bank top-up simulation, peer transfers, and utility bill payments (mobile recharge, electricity) with specialized `BILL_PAY` transaction logging.
- Integrated Swagger UI for auto-generated API documentation and configured a complete Postman collection with environment token auto-saving scripts for streamlined testing.

Technical Skills

Languages: C, C++, JavaScript (ES6+)
Frontend: HTML5, CSS3, React.js, Tailwind CSS, Redux Toolkit
Backend: Node.js, Express.js, REST APIs, JWT, Bcrypt
Database: MongoDB, PostgreSQL
Tools & Platforms: Git, GitHub, Vite, ImageKit, Gemini API, Swagger

Certifications & Courses

Full Stack Web Development — Apna College
Comprehensive web development bootcamp covering HTML, CSS, JavaScript, and MERN stack — *2023 – 2025*

Backend Development — Chai and Code / Sriniously
In-depth backend course covering Node.js, Express.js, databases, and API design — *2025*

Data Structures and Algorithms with C++ — Online
Core DSA concepts including arrays, linked lists, stack,trees . — *2024*
