www.linkedin.com/in/rishab-tomar-6055202a5 / https://*github*.com/RishabTomar

Education

·RKGIT Group of Institutions *Ghaziabad, Uttar Pradesh*
B.Tech./ Computer Science and Engineering
December 2022 - June 2026 CGPA: 8.1

Technical Skills

- **Languages:** Python, C, Java, SQL
- **Web Technologies:** Html, CSS, JavaScript, Django, Rest APIs
- **Databases:** MySQL , DBMS
- **Tools:** VS Code, Git, GitHub, MS Excel, Power BI, Cursor AI, Vercel, Claude ai
- **Others:** Data Structures, OOPS, Database, Computer Network, Machine learning, BERT

Experience

· Cognifyz Technologies *July 2025 - August 2025*
Power BI Intern

· Built 5 dashboards in Power BI to track sales trends and KPIs while validating performance and insights.

· Optimized Python-based workflows to improve data preprocessing efficiency and accuracy for a major sales project.

· Awarded Best Performer status out of 700+ interns for strong performance and a data-driven approach to problem-solving.

Projects and Learning

Fake News Detection System | GitHub

Tools: Python, Django, Flask, Scikit-learn, pandas, NLTK, BERT, MYSQL, Html, CSS, JavaScript, Git

– Developed a **Fake News Detection System** using **TF-IDF and Logistic Regression** achieved **92% accuracy** of news articles
– Enhanced the model by integrating **BERT-based NLP**, improving contextual understanding and prediction performance trained on **20K+ dataset**.
– Performed **text preprocessing using NLTK** including tokenization, Stop word removal, and vectorization for improved model efficiency.
– Built and deployed a **Flask web application** to allow users to input news text and get real-time predictions.

·Student Performance Prediction| GitHub

Tools: HTML, CSS, Python, JavaScript, NumPy, Matplotlib, Tailwind, Random forest, MYSQL, VS Code

– Developed a **Student Performance Prediction model** using machine learning algorithms to predict student scores based on academic and demographic data.
– Performed **data preprocessing and exploratory data analysis (EDA)** using Pandas, Matplotlib, and Seaborn to identify key factors affecting performance.
– Implemented and compared multiple models (**Linear Regression, Decision Tree, Random Forest**) and optimized performance for better accuracy.

·Solar Model| GitHub

Tools: HTML, CSS, JavaScript, React.js, Three.js

– Created an interactive model-based webpage using React.js and Three.js to simulate celestial movements within the solar system, achieving frame rates of 60 FPS for smooth visuals.
– Demonstrated front-end expertise by rendering realistic animations of the moon orbiting Earth, Earth revolving around the Sun, and a space station in orbit, engaging over 1,000 users monthly with these cutting-edge simulations.

Certification and Courses

· HCL TECH: Certificate of completion Data Engineering and visualization program
· COURSERA: Introduction to Data Science in Python: University Michigan Dec2023
· DUCAT: Certificate of completion 2 Days workshop on data science

Achievements

· Pushpak club member 2023 Represented the club at IIT Roorkee
· ROBO Dash 2023 *1st Runner-up*
· Epoque RKGIT Group of Institutions 2023 *Winner (Group Dance)*
· Solved 200+ problems on Leet Code / GFG
