Data Analyst & ML Engineer with hands on experience of transforming raw data into strategic business insights using **SQL, Python, and Power BI.** Experienced in developing high-accuracy predictive models (**95% accuracy in fraud detection**) and interactive dashboards that guide inventory and marketing decisions. Strong background in **exploratory data analysis (EDA) and machine learning**, with a focus on improving product strategy and operational efficiency.

EDUCATION

Maharaja Agrasen Institute of technology (GGSIPU) **2021-2025**

- Computer science and engineering | CGPA: **8.59**

Kendriya Vidyalaya No 2 Delhi Cantt, Delhi India **2019 - 2021**

- CBSE (Class XII) | Percentage: **92%**
- CBSE (Class X) | Percentage: **90%**

Skills

MySQL | Python | MS Excel | Machine learning | NumPy & Pandas

Experience

Data Analyst Intern, Trainity **Feb 25 – May 25**

- Utilized SQL, Excel, Power Bi to **Preprocess, filter, and visualize data** and present it making it useful for the clients to take **informed business decisions.** Worked on **5+ projects** and solved various problems contributing to the company.
- **Created dashboards and reports** to highlight trends enabling stakeholders to **improve product strategy, outreach and resource planning**.

Machine learning engineer, Cantilever **Jul'24 - Aug'24**

- Sentiment analysis: Worked on **predicting feedback** based on given reviews and classifying it as clusters of good or bad reviews using textual data. Achieved an **accuracy of 89 percent**.
- Credit card fraud detection: Developed a logistic regression model to classify credit card transactions, **achieving 95% accuracy** in distinguishing fraudulent activity from valid purchases using transaction data and behavioral patterns for fraudulent purchase detection.

Projects

BlinkIt Dashboard | Power BI, DAX, Data Visualization GitHub

- Designed an interactive Power BI dashboard to analyze Blinkit's sales performance, **analyzed $1.2M in total sales across 8,523 items**.
- Revealed that Fruits & Snacks alone generated **$360K+ (30% of total sales),** helping prioritize high-impact product categories for inventory and promotions.

Pizza Sales analysis | SQL, Data Cleaning, Subqueries, Joins GitHub

- Performed **SQL-based exploratory analysis** on pizza sales data of over **20000+ orders** to uncover patterns in **revenue, orders, and customer preferences.**
- Applied SQL to answer key business questions, such as identifying **top-selling pizzas, peak order hours, and revenue-driving categories**.

Netflix data analysis | Python, Pandas, Seaborn GitHub

- Used Python and Pandas to analyze movie data of **7500+ movies** and uncover insights on **top-performing actors, directors, and genre trends**.
- Solved **10+ business problems** analyzed **content trends over time, content ratings, and country-wise distribution** to support strategic content planning decisions.

Achievements

- HackerRank 4-Star in SQL
- Represented college in inter-college volleyball tournaments
- LeetCode SQL Achievement (50 Questions Badge)
