Education

JSS Academy of Technical Education Noida Nov 2022 – June 2026
Bachelor in Electronics and Communication Engineering: 7.13 CGPA

Delhi Public School, Bareilly (2022)
Intermediate - PCM – Grade- 81.4

Bishop Conrad Sr. Sec. School (2020)
High School - Grade-73.4

Experience

Summer Internship at UPPCL(July 2025- August2025):

- Gained hands-on exposure to power generation, transmission, and distribution systems in a government utility environment.
- Studied substation equipment such as transformers, circuit breakers, relays, and switchgear operations.
- Assisted engineers in monitoring load flow, fault analysis, and maintenance of electrical infrastructure.
- Learned safety procedures, energy management practices, and real-time grid operation techniques.

Projects

Automated Inventory Management System:

- Designed and implemented an IoT-based inventory monitoring system using NodeMCU ESP8266, load cell, and HX711 amplifier for real-time weight-based stock calculation.
- Integrated cloud connectivity via ThingSpeak for remote inventory monitoring and used IFTTT for email alerts on low stock thresholds.
- Displayed live data on a 128×64 OLED and enabled accurate, automated inventory tracking to eliminate manual errors and improve warehouse/store efficiency.
- Developed a scalable system ideal for supermarkets and large storerooms, reducing human effort and enhancing pre-planning and decision-making capabilities.

Home Automation using IOT:

- Developed a home automation system integrating IoT technologies for remote control and monitoring of household devices.
- Utilized microcontrollers and wireless communication protocols (Wi-Fi , Bluetooth) to automate lighting, appliances, and security systems.
- Implemented secure user interfaces for mobile and web-based control, ensuring energy efficiency, accessibility, and enhanced safety.

Smart Shopping Cart using IoT:

- Designed and implemented an IoT-based smart shopping cart for real-time product scanning, automated billing, and faster checkout using RFID.
- Integrated a microcontroller with Wi-Fi connectivity to sync cart data with a cloud database for live item tracking.
- Implemented dynamic price calculation with add/remove item functionality to improve checkout efficiency.
- Designed a user interface to display items and total cost, reducing manual billing and queue time.

Technical Skills

- **Languages:** MATLAB, JAVA
- **Technologies:** Arduino
- **Soft Skills: Problem-**Solving Skills, Communication Skills, Leadership

Extracurricular activities

- **Writing (Member of drama society)**
- **Part of nonprofitable organization- YFAC**
