CAREER OBJECTIVE

To secure a challenging software engineering role where I can apply my expertise in full-stack development, AI/ML, and problem-solving to deliver real-world impact while continuously growing as an engineer.

EDUCATION

B.Tech in Computer Science & Engineering (Specialization: Artificial Intelligence & Machine Learning)
Pranveer Singh Institute of Technology, AKTU University | 2023 – 2027 | 77.04% (upto 5th sem)

Class XII (ISC Board) -| The Chintels School | 2022–2023| 86.8%
Class X (ICSE Board) -| The Chintels School | 2020–2021| 96.3%

TECHNICAL SKILLS

Languages: Java, Python

AI / Machine Learning: Supervised & Unsupervised Learning, Machine Learning Algorithms (Regression, Classification, Clustering), Deep Learning (ANN, CNN, RNN), Natural Language Processing (NLP)

Web & Frameworks: Express.js, React, Node.js, Spring Boot, HTML, CSS, JavaScript, Flask

Databases & Tools: SQL, MongoDB, Git, GitHub, Linux (Basics)

Core Competencies:: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Problem Solving, Debugging & Optimization

PROJECTS

DarkSense AI *(Ongoing)*

BERT · Vision Transformer · Web Scraping · Multimodal AI

- Contributed to textual analysis using BERT (NLP) for detecting dark patterns by identifying manipulative language such as fake urgency, misleading discounts, and deceptive claims from scraped e-commerce content.
- Collaborated in building a fusion-based explainable system integrating textual insights with visual and heuristic signals to generate interpretable risk scores for scalable, real-time detection across platforms.

Car Rental Platform *(Jan 2026-March 2026)*

MongoDB · Express · React · Node.js (MERN Stack)

Built a full-stack vehicle rental platform on the MERN stack, supporting end-to-end rental workflows for two distinct user roles (admin and customer).

- Engineered core rental features including real-time vehicle browsing, dynamic price calculation, booking creation, and cancellation management.
- Developed an admin fleet management module with revenue tracking and booking analytics to support operational decisions.

LinkedIn Message Generator- Generative AI Tool *(Nov 2025-Dec 2025)*

React · Spring Boot · Java · Gemini AI API

Built a full-stack generative AI application that automates personalised LinkedIn outreach by analysing context and producing tailored messages via the Gemini API.

- Designed a Spring Boot REST API backend in Java that processes user-provided prospect data and constructs structured prompts for the Gemini API.
- Integrated the Google Gemini API to generate context-aware, tone-matched outreach messages based on prospect profile details and recent activity.

CERTIFICATIONS

- **Supervised Machine Learning: Regression & Classification** - DeepLearning.AI | 2026
- **Oracle Certified Foundations Associate** -Oracle | 2025
- **TCS iON Career Edge — Young Professional** -TCS iON | 2024
