OBJECTIVE

Full-stack developer specializing in building scalable backend systems and real-time applications using microservices architecture, with hands-on experience building production-grade systems using WebSockets, message queues, and AWS cloud deployment.

EDUCATION

Bachelor of Technology (IT), Pranveer Singh Institute Of Technology — 2023 – 2027

Intermediate (ISC Board), St. Mary's Orthodox School — 2021 – 2023

SKILLS

Languages: C, C++, JavaScript, SQL
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST API, Redis, RabbitMQ, Socket.IO, Microservices
Databases: MongoDB, PostgreSQL, Redis
Cloud/DevOps: Linux, Nginx, Docker, AWS, CI/CD, GitHub Actions, Grafana
Tools & other: Git, GitHub, Postman, VSCode
Core CS: Data Structures and Algorithms, DBMS, Operating Systems, OOPS

PROJECTS

HireHeaven – AI-Driven Hiring Platform (02/2026 – 05/2026)

Tech Stack: Next.js, Node.js, Express.js, PostgreSQL, Redis, Apache Kafka, Docker, AWS EC2, Github Actions, Gemini API

- Developed a scalable hiring platform to streamline job applications and recruiter workflows using **microservices architecture**, improving system performance and modularity.
- Designed an event-driven system using **Apache Kafka for asynchronous email notifications** and real-time job status updates, improving system responsiveness and decoupling services.
- Integrated **AI-powered features** for resume analysis and career guidance, along with secure file uploads using Cloudinary.
- Implemented **PostgreSQL (Neon DB)** for persistent storage and Redis for caching and secure token management.
- Configured monitoring and observability using **Prometheus and Grafana** to ensure system reliability.
- Containerized services using Docker and deployed them on **AWS EC2 with Nginx** and secured endpoints with HTTPS (Let's Encrypt).

SafeX – AI-Powered Real-Time Chat Platform (05/2026 – Present)

Tech Stack: Next.js, Node.js, Express.js, Socket.IO, MongoDB, Redis, RabbitMQ, Docker, AWS EC2, GitHub Actions Hugging Face API

- Built a **scalable real-time chat platform** using microservices architecture, enabling low-latency messaging via WebSockets (Socket.IO) for concurrent users.
- Designed an **event-driven system with RabbitMQ**, decoupling services and improving reliability of OTP workflows through asynchronous processing.
- Developed an **AI-powered moderation pipeline** using regex + Hugging Face NLP models to detect spam, toxic content, and malicious links in real-time.
- Implemented Redis-based caching and **rate limiting** to reduce database load and prevent API abuse, improving **response time by ~30%** under concurrent traffic.
- Containerized services using **Docker** and deployed on **AWS EC2 with Nginx + HTTPS**, with CI/CD automation via GitHub Actions.

AuthShield – Secure Authentication System (11/2025 – 01/2026)

Tech Stack: React.js, Node.js, Express, MongoDB, Redis, JWT

- Built a **production-grade authentication system** using **JWT-based access & refresh tokens** for secure and scalable user sessions.
- Implemented **OTP-based login and email verification** using **Redis with expiry**, enhancing security and reducing unauthorized access.
- Designed **Redis-backed session management and rate limiting**, enabling efficient token validation and handling concurrent users.
- Secured application with **HTTP-only cookies, Zod validation, and bcrypt hashing**, preventing **XSS, injection attacks, and credential leaks.**

ACHIEVEMENTS

- Achieved rating of 1700+ on LeetCode (Top 11%)
- Solved 700+ coding questions on all platforms (C++).
- 5-star rating in Problem Solving on HackerRank

CERTIFICATIONS

- Programming with JavaScript – Meta (Coursera) — 10 / 2024
- Full Stack Web Development Bootcamp – Udemy — 11 / 2025
- AWS Cloud Practitioner Essentials – AWS — 04 / 2026
