PROFESSIONAL SUMMARY

AI Engineer skilled in Python, SQL, and Machine Learning, with hands-on experience building Generative AI systems using LangChain and RAG (ChromaDB). Recently completed a GenAI and computer-vision engineering internship at Abhiwan Technology. National hackathon winner with a track record of shipping end-to-end AI applications from architecture to deployment.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Machine Learning: Scikit-learn

Generative AI: LangChain, RAG, LLMs, Prompt Engineering

Developer Tools: Git, GitHub, Docker, Streamlit

WORK EXPERIENCE

AI Engineering Intern | *Abhiwan Technology*, *Noida (Remote)* **May 2026 – Jul 2026**

- Built GenAI pipelines and RAG-based document assistants in Python using LangChain and ChromaDB for computer-vision, document-analysis, and enterprise knowledge-retrieval workflows.
- Cut inference latency ~30% via prompt-caching; built Streamlit apps integrating YOLO11 and Gemini 2.5 Flash through LangChain.

Machine Learning Intern | *Cognition Enterprises*, *Rakha* **Jun 2024**

- Trained ML models with Scikit-learn and Pandas for industrial sensor data analysis, automating evaluation reporting and cutting manual analysis time ~40%.

Python Automation Intern | *Jindal Steel*, *West Raigarh* **Jun 2023**

- Automated 5+ data-processing workflows with Python, Pandas, and openpyxl, reducing reporting time ~35%.

PROJECTS

NAIF — Offline Multimodal AI Assistant — *Python*, *LangChain*, *RAG*, *ChromaDB*, *Ollama*

- Architected a fully offline, privacy-preserving AI assistant orchestrating Gemma 3 and Qwen2.5 Coder via Ollama across 5 modules (conversational AI, coding assistant, document intelligence, face recognition, CCTV surveillance).
- Implemented a RAG pipeline with LangChain and ChromaDB, deployed on a local server with sub-3-second latency and zero cloud dependency; containerized with Docker.

RAG Document Q&A System — *Python*, *LangChain*, *ChromaDB*, *LLM*

- Built an end-to-end RAG pipeline for natural-language querying over custom document sets using ChromaDB vector search with sentence embeddings; open-sourced on GitHub and deployed on Google Cloud Run.

AI Prescription Reader — *Python*, *OCR*, *NLP*, *Streamlit*

- Built an OCR-based document-intelligence pipeline extracting structured data (medicine names, dosages, instructions) from prescriptions; deployed on Streamlit Cloud.

EDUCATION

B.Tech, Computer Science and Engineering | RVS College of Engineering and Technology, Jamshedpur | Expected May 2026

CERTIFICATIONS

MLOps with Vertex AI: Model Evaluation (Google Cloud) · MLOps for Generative AI (Google Cloud) · Generative AI (IBM/Coursera) · RAG and Agentic AI (IBM/Coursera) · GenAI Powered Data Analytics Job Simulation — Tata

ACHIEVEMENTS

Hackathon Winner — HackHorizon (State Level), 1st Place, Apr 2025 · National-Level Participant — BIT Sindri Hackathon · Published Author — full-length book on astronomy and human existence, 2025
