VAISHNAVI SHRIVASTAVA

Delhi, India | +91 8810295774 | vaishnavishrivastava232@gmail.com | linkedin.com/in/vaishnavishrivastava | github.com/VaishnaviShrivastav5

PROFESSIONAL SUMMARY

Detail-oriented Machine Learning Engineer and Data Science graduate student with hands-on experience building, training, and evaluating supervised machine learning models on real-world datasets. Proficient in Python, SQL, data preprocessing, feature engineering, and model evaluation. Published researcher in ML-based personality detection. Strong foundation in predictive modeling, data analysis, regression, classification, and statistical evaluation. Passionate about applying machine learning and data science to solve impactful, data-driven problems.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Machine Learning & Data Science: Supervised Learning, Regression, Classification, K-Means Clustering, Feature Engineering, Data Preprocessing, Model Evaluation, Predictive Modeling, Statistical Analysis

Libraries & Frameworks: Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, ANN (Artificial Neural Networks)

Data Visualization & Tools: Power BI, Tableau, MySQL

Development Environments: Jupyter Notebook, Visual Studio Code, PyCharm

Core Concepts: Algorithms, Complexity Analysis, Logical Reasoning, Data Structures

PROJECTS

Narcissism Detection Using Machine Learning | Independent Research | Delhi, India | *2024 – 2025*

- Preprocessed psychological datasets (Dirty Dozen) using Python, applying data cleaning and transformation techniques to produce ML-ready input data.
- Applied K-Means Clustering to identify distinct behavioral patterns and personality groups, improving model interpretability.
- Built, trained, and compared multiple supervised learning models — Decision Tree, Random Forest, and Regression — to determine the highest-performing approach.
- Evaluated models using R^2 Score and Silhouette Score; research findings published in the International Journal of Research and Analytical Reviews (IJRAR), Vol. 12, Issue 2, 2025.

YouTube Ad View Prediction Model | Academic Project | Delhi, India | *2024*

- Designed and built a predictive analytics model to forecast YouTube ad view counts using Linear Regression, SVR, Decision Tree, Random Forest, and ANN algorithms.
- Performed feature engineering and data preprocessing using Pandas and NumPy to ensure accurate and reliable model inputs.
- Selected the optimal predictive model based on lowest error metrics (MAE, MSE, RMSE) and highest accuracy score.
- Visualized ad performance trends and model insights using Matplotlib and Seaborn to support data-driven decision-making.

RESEARCH & PUBLICATIONS

Narcissism Detection Using Machine Learning

International Journal of Research and Analytical Reviews (IJRAR) | Volume 12, Issue 2 | Paper ID: IJRAR25B3369 | 2025

EDUCATION

M.Sc. in Computer Science | Sharda University | Greater Noida, India | *Aug 2025 – May 2027*

CGPA: 8.74 / 10.00

Bachelor of Computer Applications (BCA) | Sharda University | Greater Noida, India | *Sep 2022 – May 2025*

CGPA: 8.62 / 10.00

CERTIFICATIONS

- Python and SQL for Data Science — Scaler
- Supervised Machine Learning: Regression and Classification — DeepLearning.AI
- Machine Learning — Internship Studio
- ChatGPT Prompt Engineering for Developers — DeepLearning.AI
- Python for Beginners — Scaler
- Microsoft Excel — Jobaaj Learning
