Summary

Results-driven final-year B.Tech student in Electronics and Communication Engineering with proven experience designing and deploying full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js). Proficient in building RESTful APIs, implementing JWT-based authentication, managing global state with Redux Toolkit, and integrating third-party services such as Gemini AI and ImageKit. Demonstrated ability to deliver responsive, scalable, and user-focused applications through real-world projects. Actively seeking backend or full-stack development roles where I can contribute immediately and grow as an engineer.

Education

JSS Academy of Technical Education — Noida, India
B.Tech in Electronics and Communication Engineering — *2022 – 2026*

St. Xavier's High School, Fatehpur — Fatehpur, India
Class XII – 87.4% — *2019 – 2020*

Projects

EventFlow | *MERN Stack, Node.js, Express.js, MongoDB, JWT, Nodemailer, React.js* — GitHub ↗

- Built a full-stack event booking platform with role-based access control (RBAC), separating user and admin workflows—users can browse events, request bookings, and track status via a personal dashboard, while admins manage events, approve requests, and confirm payments through a dedicated panel.
- Implemented secure authentication using JWT with email-based OTP verification via Nodemailer, ensuring every booking request is tied to a verified user session and all protected routes enforce token-based access control.
- Developed an admin analytics dashboard displaying real-time revenue, confirmed bookings, and pending requests, alongside a complete booking approval workflow with payment confirmation logic and event lifecycle management.

PhonePe Backend Clone | *Node.js, Express.js, MongoDB, Mongoose, JWT, Bcrypt, Swagger* — GitHub ↗

- Built a production-style FinTech REST API using Node.js and Express.js, implementing JWT-based stateless authentication, Bcrypt password hashing, and 4-digit MPIN verification enforced on all outbound transactions.
- Engineered core payment features including dynamic UPI ID generation, P2P money transfers via phone number and UPI ID lookup, bank top-up simulation, and utility bill payments (mobile recharge, electricity) with transactional logging.
- Integrated Swagger UI for auto-generated API documentation and configured a Postman collection with environment token auto-saving scripts, ensuring end-to-end testing coverage across all endpoints.

Technical Skills

Languages: C, C++, JavaScript (ES6+)
Frontend: HTML5, CSS3, React.js, Tailwind CSS, Redux Toolkit
Backend: Node.js, Express.js, REST APIs, JWT, Bcrypt
Database: MongoDB, PostgreSQL
Tools & Platforms: Git, GitHub, Vite, ImageKit, Gemini API, Swagger

Certifications & Courses

Full Stack Web Development — Apna College
Comprehensive web development bootcamp covering HTML, CSS, JavaScript, and MERN stack — *2023 – 2025*

Backend Development — Chai and Code / Sriniously
In-depth backend course covering Node.js, Express.js, databases, and API design — *2025*

Data Structures and Algorithms with C++ — Online
Core DSA concepts including arrays, linked lists, stack,trees . — *2024*
