PROFESSIONAL SUMMARY

Final-year B.Tech CSE (AI-ML) student at RKGIT with hands-on experience in backend development (Node.js, FastAPI, REST APIs) and AI/ML engineering (LangChain, RAG Pipelines, Deep Learning, Computer Vision). Built production-ready projects combining LLMs, CNNs, and backend services. Seeking a full-time fresher role in backend or AI/ML engineering at a fast-moving startup.

TECHNICAL SKILLS

- Languages: Python, JavaScript, Java
- Backend: Node.js, Express.js, FastAPI, REST APIs, Microservices
- AI/ML/GenAI: LangChain, LangGraph, RAG Pipelines, LLM Integration, NLP, TF-IDF, FAISS, Prompt Engineering
- Deep Learning/CV: TensorFlow, Keras, CNN, OpenCV, Medical Image Analysis, NumPy, Pandas, Matplotlib
- Frontend & DB: React.js (basics), Redux, Tailwind CSS | MongoDB, MySQL, PostgreSQL
- Tools: Git, GitHub, Postman, VS Code

WORK EXPERIENCE

AI/ML Intern — QMANSYS Infosolutions LLP (NASSCOM Member) | Jul 2024 – Oct 2024 | Remote

- Built a Fake News Detection web application using Python, NLP, TF-IDF, and Machine Learning.
- Trained and tested the model on a news dataset to classify news as Real or Fake.
- Developed a simple Flask-based web interface for users to check news authenticity.
- Used GitHub for code management and version control during the project.

PROJECTS

Brain Tumor Detection using Deep Learning

Tech: Python, TensorFlow/Keras, CNN, OpenCV, NumPy, Pandas, Matplotlib

- Developed a Deep Learning-based Brain Tumor Detection system using MRI images for automated multi-class tumor classification — achieved 94%+ accuracy on 5,000+ MRI images.
- Designed and trained Convolutional Neural Networks (CNNs) using TensorFlow/Keras for image feature extraction and classification from medical imaging datasets.
- Implemented image preprocessing and augmentation pipeline using OpenCV and NumPy — applied flipping, rotation, and normalization to reduce overfitting and improve generalization.
- Built an end-to-end Computer Vision pipeline: data loading → preprocessing → augmentation → model training → prediction → evaluation with Matplotlib visualizations.
- Applied Medical Image Analysis concepts for healthcare-focused AI; validated model using confusion matrix and classification report across multiple tumor classes.
- Benchmarked custom CNN architecture against transfer learning approaches to evaluate performance trade-offs on medical imaging data.

RAG-Based Document Q&A System

Tech: Python, LangChain, FAISS, Vector Embeddings, LLM

- Built a RAG-based Question Answering System using Python and LangChain.
- Split documents into chunks, created vector embeddings, and stored them in FAISS for semantic search.
- Retrieved the most relevant document chunks before sending them to the LLM to generate context-based answers.
- Used Prompt Engineering to improve the quality and accuracy of responses.

EDUCATION

B.Tech — Computer Science & Engineering (AI-ML) | CGPA: 7.4 2022 – 2026

Raj Kumar Goel Institute of Technology (RKGIT), Ghaziabad

CERTIFICATIONS

- Generative AI for Everyone — DeepLearning.AI / Coursera
- NASSCOM Internship Completion — QMANSYS Infosolutions (AI/ML, 3 months)
