SUMMARY

Senior Android Engineer with 6+ years of experience building production-grade Android applications using Kotlin and Java. Experienced in Jetpack Compose, MVVM, Clean Architecture, Coroutines, Flow, Hilt, Koin, Retrofit, Room, SQLDelight, KMM, and REST APIs. Strong experience in healthcare applications, real-time ECG data processing, hardware integration, reusable SDK development, and high-performance Canvas-based rendering. Additional experience in Flutter, AWS, and cross-platform mobile development.

SKILLS

Languages	Kotlin, Java, Dart
Android Development	Android SDK, Jetpack Compose, Material 3, XML UI, ViewModel, LiveData, StateFlow, Flow, Coroutines
Architecture	MVVM, Clean Architecture, SOLID Principles, Repository Pattern, Dependency Injection, Modular Architecture
Android Libraries	Retrofit, Room Database, SQLDelight, Ktor, Hilt, Koin, Apollo GraphQL, Gson
Kotlin Multiplatform	KMM, Compose Multiplatform, Android/iOS Integration, Shared Business Logic, SharedUi (Specific Native Ui using expect composable function)
Flutter Development	Flutter SDK, Bloc, Provider, GetX, Declarative UI
Networking & APIs	REST APIs, Retrofit, Ktor, GraphQL, JSON, API Integration
Databases	Room Database, SQLite, SQLDelight, MySQL, DynamoDB
Cloud & Backend	AWS Lambda, API Gateway, DynamoDB, S3, CloudWatch, Spring Boot (Basics)
Performance	Canvas Rendering, API Optimization, Real-time Data Processing, Background Processing
CI/CD & DevOps	Git, GitHub, GitHub Actions, Docker
Tools & Platforms	Android Studio, VS Code, Postman

EXPERIENCE

Sunfox Technologies **August 2020 – December 2025**

Senior Mobile Developer

- Designed and developed production-grade Android applications using Kotlin, MVVM, Coroutines, Flow, Retrofit, Room, and Hilt.
- Built the Spandan ECG Android application from scratch, integrating ECG hardware over USB/OTG for real-time data acquisition, processing, and visualization.
- Architected a reusable Android SDK for ECG data processing, enabling real-time analysis and seamless B2B integrations.
- Implemented high-performance ECG graph rendering using Android Canvas for real-time physiological data visualization.

- Designed efficient data processing pipelines for continuous ECG streams while keeping heavy processing off the Android main thread.
- Designed and integrated RESTful APIs for real-time ECG streaming and reliable data synchronization.
- Optimized API communication and data flow, reducing latency by 25%.
- Developed serverless backend APIs using AWS Lambda, API Gateway, and DynamoDB to support healthcare applications.
- Contributed to Flutter applications and cross-platform mobile development while maintaining Android-specific integrations.
- Led production releases, debugging, performance optimization, and deployment of mobile applications.

Headspire Technologies **January 2019 – June 2020**

Mobile App Developer

- Developed Android applications using Java and Kotlin, implementing reusable and maintainable application components.
- Integrated REST APIs and optimized application data flow for improved reliability and performance.
- Implemented dependency injection and modular application architecture using Hilt.
- Worked with Android UI components, networking, local data storage, and application lifecycle management.
- Collaborated with cross-functional teams to deliver scalable mobile features and production releases.

PROJECTS

Spandan ECG *Kotlin, MVVM, Coroutines, Flow, Retrofit, Room*

- Built a real-time ECG monitoring Android application integrated with ECG hardware over USB/OTG.
- Implemented real-time ECG data processing and visualization using Kotlin Coroutines, Flow, and Android Canvas.
- Implemented local data persistence and synchronization using Room Database and REST APIs.

Spandan One App *Flutter, Bloc, Provider, REST APIs*

- Developed a cross-platform Flutter application for real-time ECG data synchronization, monitoring, and reporting.

AI Assistant Chat App *Kotlin, Jetpack Compose, MVVM, Spring Boot*

- Developed an AI-powered chat application using Jetpack Compose with custom backend integration.
- Implemented modern Android UI and API-based communication between the mobile application and backend service.

EDUCATION

Master of Computer Applications (MCA) Graphic Era Hill University
B.Sc. Information Technology Graphic Era Hill University

ACHIEVEMENTS

- Received the **Mountain Mover Award** at **Sunfox Technologies** for outstanding contribution, ownership, and impact.
- Built production healthcare applications for real-time ECG monitoring, data processing, and reporting.
- Architected and deployed reusable SDK components supporting B2B healthcare integrations.
- Optimized application and API performance for real-time healthcare data processing.
