Professional Summary

AI/ML Developer with experience building machine learning applications using Python, Scikit-learn, Flask, Pandas, and Streamlit. Developed predictive models for healthcare, real-estate, and recommendation systems involving data preprocessing, feature engineering, model evaluation, REST API integration, and SQL databases.

Technical Skills

- **Languages:** Python, Java, C++, SQL, JavaScript
- **Machine Learning & AI:** Machine Learning, Recommendation Systems, Classification, Regression, Model Evaluation, Feature Engineering, Data Preprocessing, Exploratory Data Analysis (EDA)
- **Libraries:** Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib, Streamlit
- **Web & Database:** Flask, REST APIs, MySQL
- **Tools:** Git, GitHub, Postman, VS Code, PyCharm, Linux
- **Core Concepts:** OOP, Data Structures & Algorithms, SDLC

Education

Bachelor of Computer Applications (BCA) 2022 – 2025
ERA University, Lucknow
Percentage: 74.38%

Experience

AI/ML Intern — TechSaksham Mar 2025–Apr 2025

- Developed a disease prediction system using Python, Scikit-learn, and Streamlit.
- Applied data preprocessing and feature engineering techniques to improve model performance.
- Built an interactive interface for real-time disease prediction and model evaluation.

Trainee – Python & ML Developer — Criterion Tech Feb 2025–Jul 2025

- Developed and deployed a House Price Prediction System using Flask, Scikit-learn, and Linear Regression for real-time price estimation.
- Integrated machine learning models with web applications for real-time predictions.
- Performed API testing using Postman and worked with SQL databases for data management.

Projects

AI-Powered Medical Diagnosis System GitHub

- Developed disease prediction models using Python, Scikit-learn, and Streamlit.
- Applied data preprocessing and feature engineering techniques.

House Price Prediction System GitHub

- Built a web-based ML application using Flask, MySQL, and Linear Regression.
- Integrated backend prediction models with a responsive UI.

Movie Recommendation System GitHub

- Developed a Movie Recommendation System using Python, Pandas, and Scikit-learn to suggest movies based on user preferences.
- Applied content-based filtering and similarity algorithms to generate personalized recommendations.
- Performed data preprocessing, feature extraction, and exploratory data analysis (EDA) on movie datasets.

Certifications

- Python with IoT – TECHPILE (2024)
- Data Science & Analytics – HP LIFE (2024)
- MERN Full Stack Development Workshop – DIGIPODIUM (2024)
