SHREYANSH CHATURVEDI

9369389171 shreyanshchaturvedi3700@gmail.com LinkedIn GitHub Varanasi, Uttar Pradesh

Professional Summary

Backend-focused Software Engineer with 1 year 4 months of professional experience building and maintaining scalable backend services using Node.js, Express.js, JavaScript, TypeScript, and RESTful APIs. Experienced in developing APIs, implementing business logic, database integration, authentication and authorization, and resolving production issues. Proficient in PostgreSQL, MongoDB, Cassandra, Docker, Git, and Jenkins. Contributed to Seceon products including aiCompliance, CMX360, aiDAST, and CGuard through feature development, API enhancements, backend integrations, debugging, and production bug fixes.

Technical Skills

Languages: JavaScript, Java, Python, SQL
Backend: Node.js, Express.js, RESTful APIs, API Development, API Integration, Authentication & Authorization
Databases:PostgreSQL, MongoDB, Cassandra, MySQL
DevOps & Tools:Docker, Jenkins,Kubernetes, Git, GitHub, Postman, JIRA
Cloud Platforms:AWS, Azure

Experience

Seceon Inc. **May 2025 - Presnt**
Software Engineer *Varanasi, Uttar Pradesh*

- Developed and implemented end-to-end backend features for Seceon's CMX360 and aiDAST products using Node.js and Express.js, including RESTful APIs, business logic, validations, data processing, and backend integrations.
- Designed and maintained backend workflows for CMX360 to fetch and process compliance controls from JSON-based framework data and integrate KPI-driven technology-control data into application workflows.
- Implemented and maintained database operations and data models using PostgreSQL, MongoDB, and Cassandra to support application features and data processing.
- Worked across the backend lifecycle including feature development, API integration, debugging, bug fixing, production issue resolution, and end-to-end troubleshooting of application workflows.
- Collaborated with frontend and cross-functional teams to integrate REST APIs and deliver production-ready features, using Git, Docker, Jenkins, and Postman for version control, containerization, CI/CD, and API testing.

Projects

aiComplianceCMX360 | *Node.js, Express.js, REST APIs, JSON, PostgreSQL* **2025**

- Developed and implemented end-to-end backend features for CMX360 using Node.js and Express.js, including REST APIs, business logic, data processing, and service integrations.
- Implemented backend workflows to fetch and process compliance controls from JSON-based framework data and make control information available to the application through APIs.
- Integrated KPI-driven technology-control data generated by the GRC team, enabling the backend to fetch, process, and expose KPI information for compliance workflows.

EchoTalk Platform with Real-Time Chat & Video | *React.js, Node.js, Express.js, MongoDB* **2024**

- Developed a full-stack MERN application enabling users to connect globally through real-time chat and video communication for language learning.
- Integrated Stream API for real-time messaging and video calling and developed supporting backend APIs and application workflows.
- Implemented secure backend functionality and optimized client-server data handling using Node.js, Express.js, MongoDB, Zustand, and TanStack Query.

Education

Deen Dayal Upadhyay Gorakhpur University **2021- 2025**
Bachelor of Technology in Information Technology *CGPA: 8.18/10*

Achievements

- Successfully resolved production backend issues involving APIs, data processing, integrations, and application workflows, supporting reliable product releases.
- Delivered backend features and enhancements across multiple Seceon products, including CMX360, aiDAST, aiCompliance, and CGuard.
