Summary

Computer Science undergraduate with hands-on experience in Java, Spring Boot, RESTful API development, React, and SQL. Skilled in designing backend applications using MVC architecture, OOP, and JDBC. Actively use AI tools such as GitHub Copilot and ChatGPT for coding, debugging, and learning new technologies, applying prompt engineering to improve development productivity. Built AI-powered and Java-based projects integrating REST APIs, React, and browser extensions, with basic exposure to Docker and cloud deployment. Strong foundation in Data Structures, Algorithms, Multithreading, and SDLC. Seeking an entry-level AI-native Java Engineer role.

Education

IPS Academy, Institute of Engineering & Science May 2026

Bachelor of Technology in Computer Science Engineering ***CGPA: 8.2/10***

- 10th (CBSE): 83% — 12th (CBSE): 84% — No active or historical backlogs

Experience

Java Backend Intern May 2025 – July 2025

Slash Mark *Remote*

- Developed backend modules for a JDBC-based Inventory Management System using Java and Oracle SQL, managing 500+ inventory records.
- Optimized existing Java codebase by refactoring modules to improve readability, maintainability, and overall code quality.
- Applied Object-Oriented Programming principles including encapsulation, inheritance, abstraction, and polymorphism across backend components.
- Resolved database connectivity and integration issues through SQL debugging and application log analysis.
- Collaborated using Git version control and incorporated code review feedback to maintain development standards.

Projects

AI-Based Email Reply Generator | *Java, Spring Boot, OpenAI API, React, Chrome Extension, Docker* **November 2025**

- Developed a full-stack AI-powered email reply generator using Java, Spring Boot, React, and the OpenAI API.
- Designed and implemented RESTful APIs to process email content and generate context-aware responses in JSON format.
- Built a responsive React interface enabling users to generate, preview, and copy AI-generated email replies.
- Developed a Chrome Extension integrated with Gmail Compose for one-click AI-powered reply generation.
- Containerized the application with Docker and deployed it to the cloud, managing API communication, CORS configuration, and data flow across frontend, backend, and browser extension.

Car Rental Management System | *Java, OOP, Collections Framework, Eclipse IDE* **July 2025**

- Designed and developed a console-based Car Rental Management System using Java and Object-Oriented Programming principles.
- Implemented customer registration, vehicle booking, rental processing, and return management functionalities.
- Utilized Java Collections Framework (ArrayList and HashMap) for efficient data storage and real-time search operations.
- Designed modular classes for customers, vehicles, and rental transactions to improve code reusability and maintainability.

Technical Skills

Programming Languages: Java, JavaScript, SQL, Python, HTML5, CSS3
Backend Technologies: Spring Boot, Spring MVC, REST APIs, JDBC, Maven
Frontend Technologies: React.js, HTML5, CSS3, JavaScript
Databases: Oracle SQL, SQL, PL/SQL, MongoDB, MySQL
Cloud & DevOps: Docker (basic), Cloud Deployment
AI Tools & Workflow: GitHub Copilot, ChatGPT, Prompt Engineering, OpenAI API integration
Developer Tools: Git, GitHub, Postman, Eclipse, VS Code, JUnit
Core CS Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, Collections Framework, Multithreading, Exception Handling, Design Patterns, MVC Architecture, API Design, SDLC

Certifications & Achievements

- Java Programming Certification – NareshIT, Hyderabad (July 2025)
- SQL Certification – NareshIT, Hyderabad (July 2025)
- Solved 100+ Data Structures and Algorithms problems on LeetCode.
- Qualified the internal round of Smart India Hackathon 2024 and represented IPS Academy at the zonal level.
