Rishabh Shrivastava

Software Engineer |Full-Stack Developer |Javascript • Python

+91 9682852240 | shrivastavrishabh003@gmail.com

LinkedIn | GitHub

Summary

Full-Stack Developer experienced in building scalable web applications, backend systems, and high-performance data pipelines using React.js, Node.js, FastAPI, PostgreSQL, Redis, and Docker. Improved API response times by 94% and engineered ingestion systems processing 1M+ records for analytics and reporting platforms.

Skills

Languages: JavaScript (ES6+), Python, SQL, C++
Frontend Frameworks: React.js
Backend: Node.js, Express.js, FastAPI, RESTful APIs
Databases: PostgreSQL, MongoDB, Redis, Indexing, Query Optimization
DevOps & Tools: Docker, Git
Concepts: Caching, Data Pipelines, API Optimization, Scalable Backend Architecture

Experience

Anthrilo Design House Pvt. Ltd. Jan 2026 – July 2026
Full Stack Developer Intern

- Re-architected analytics system to a DB-first model, reducing dependency on external APIs.
- Reduced API latency from 12.77s to 0.77s (94%) using Redis caching and query optimization.
- Engineered ingestion pipelines processing 1.3M+ sales records with scheduled sync and webhook systems.
- Developed Next.js dashboards integrated with FastAPI backend services and PostgreSQL.
- Improved backend reliability using retries, concurrency control, indexing, and Dockerized deployments.

AFS Kitchen Equipments Sept 2025 – Dec 2025
Frontend Developer Intern

- Developed responsive UI components ensuring cross-device compatibility and frontend optimization.
- Integrated frontend systems with backend APIs for dynamic rendering and product workflows.
- Implemented filtering and sorting systems improving navigation and product discovery.

Projects

Anthrilo Management System (ERP Analytics Platform) GitHub
Next.js, FastAPI, PostgreSQL, Redis, Docker

- Built a scalable ERP analytics platform aggregating operational data from multiple business channels into centralized dashboards and reporting systems.
- Engineered DB-first architecture and ingestion pipelines syncing multi-channel operational data into normalized PostgreSQL schemas for analytics processing.
- Reduced API response latency using Redis-cached APIs while ensuring consistent performance under heavy reporting workloads.
- Designed modular containerized backend architecture with background workers, scheduled sync systems, and webhook-based event processing.

BioMark – Biometric Attendance GitHub
Python, OpenCV, LBPH

- Developed real-time facial recognition system supporting multi-user detection and attendance automation.
- Implemented automated attendance logging with structured data storage workflows.
- Optimized recognition pipeline for improved accuracy and response performance.

Education

Bachelor of Technology (B.Tech) in Computer Science 2026
Punjab Technical University

Leadership

- Outreach Lead at Google Developer Groups (GDG), organizing technical events and developer learning initiatives.
- Founded and led CodeAsters, the first coding society in the college, mentoring students in programming and software development.
