DHRUV JOSHI

Information Security Analyst | SOC · Network Security · Systems Administration | CEH Certified

+91 9582237773 | dhruvjoshi26a@gmail.com | Ghaziabad / Delhi NCR, India | LinkedIn

PROFESSIONAL SUMMARY

CEH-certified Information Security and Network Engineering professional (B.Tech CSE, graduating July 2026; CCNA coursework complete) with hands-on experience across SOC monitoring, incident response, vulnerability assessment, network security, and IT systems administration. Built a SOC lab correlating SIEM, network telemetry, and IDS/IPS alerts into a validated detection-and-response workflow; deployed a machine learning-based intrusion detection system reaching 97.8% accuracy; and reduced infrastructure incident MTTR by 30% through structured runbooks and automation. Skilled in threat triage, root-cause analysis, TCP/IP networking, Linux environments, and mapping adversary behavior to the MITRE ATT&CK framework. Adept at translating technical security findings for non-technical stakeholders.

CORE SKILLS

Security Operations & Incident Response: SOC Monitoring · Threat Detection · Threat Triage · Incident Response · Alert Investigation · Root-Cause Analysis · Log Analysis · Runbook Development · MITRE ATT&CK · Adversary TTP Analysis

Offensive & Defensive Security: Vulnerability Assessment · Penetration Testing Fundamentals (CEH) · Web Protocol & Common Attack Analysis · IDS/IPS · Endpoint Detection & Response (EDR) Concepts · Malware Behavior Analysis

Security Tooling & SIEM: SIEM (ELK Stack) · Zeek · Suricata · Wireshark · Security Onion · Log Management · Security Monitoring

Networking & Systems Administration: TCP/IP · BGP · OSPF · VLANs · Routing & Switching · Network Security · Network Troubleshooting · Linux Administration (Kali) · System Administration · Backup & Disaster Recovery · Business Continuity · VMware · Docker (basic)

Cloud & Risk: Cloud Security Fundamentals · Risk Assessment · Data-Consistency Auditing · Compliance Awareness (ISO 27001 / NIST concepts)

Automation & Scripting: Python · C++ · JavaScript · Scikit-learn · Machine Learning · Git · Security Script Development · Process Automation

Certifications: Certified Ethical Hacker (CEH) — EC-Council, Active · Cisco CCNA — Coursework Complete, Exam Scheduled

PROFESSIONAL EXPERIENCE

IT Infrastructure, Network & Backup Administrator | Aptara / Enrich Enterprises (Contract)

- Performed incident response and root-cause analysis on 15+ infrastructure and network incidents, authoring structured, version-controlled runbooks that cut mean time to resolution (MTTR) by 30%.
- Developed Python automation scripts for multi-system backup monitoring and disaster recovery, achieving a 99.9% job success rate, reducing recovery time by 40%, and maintaining zero unplanned data-loss events.
- Built data-consistency and system-audit scripts that proactively flagged 3 critical discrepancies before business-continuity impact — a detection rate 2x the team baseline.
- Supported network and systems troubleshooting across Linux and virtualized (VMware) environments, providing technical support and escalation handling for infrastructure stakeholders.

SECURITY & NETWORKING PROJECTS

Enterprise SOC Lab | *Security Onion 2.4 · ELK (SIEM) · Zeek · Suricata · VMware*

- Deployed and correlated ELK (SIEM), Zeek (network security monitoring), and Suricata (IDS/IPS) into a unified alert-to-incident workflow, mirroring a production detection-and-response and threat-hunting pipeline from packet capture to remediation.
- Tuned detection rules to reduce false-positive alert volume and documented the deployment as a reproducible runbook to improve SOC response effectiveness and analyst efficiency.

MITRE ATT&CK Threat Modeling & Adversary Analysis | *Enterprise Matrix · TTP Mapping · Threat Intelligence*

- Researched and mapped all 14 MITRE ATT&CK adversary tactics to real-world breach scenarios with paired defensive countermeasures, applying the same threat-intelligence framework used in enterprise SOC and incident-response teams to identify and communicate emerging threats.

Cloud-Based Hybrid ML Intrusion Detection System | *Python · Scikit-learn · Random Forest · Streamlit · Network Security*

- Trained a hybrid Random Forest classifier achieving 97.8% detection accuracy on KDD Cup 99 and CICIDS 2017 benchmarks, outperforming single-model baselines by 4.3 percentage points.
- Built a full-stack security alert dashboard with live traffic ingestion, severity-tiered alerting, and one-click remediation actions, reducing manual triage effort for analysts.

EDUCATION

B.Tech, Computer Science & Engineering — Graphic Era Deemed University
2022 – July 2026 | CGPA: 7.6 / 10 | Provisional Degree Expected July 2026
